South Asia and the Middle East

George van Driem

South Asia is an ethnolinguistically inordinately complex portion of the planet. The topography of the greater Himalayan region has impeded migrations of peoples throughout prehistory. The result is an intricate patchwork of language phyla and language isolates enmeshed in a geographically complex pattern. Languages of the Altaic and Daic language families have encroached upon the periphery of the Himalayan region, whereas the Indian subcontinent is the home of Indo-European, Dravidian, Tibeto-Burman and Austroasiatic languages. Moreover, South Asia is the home to the language isolates Andamanese, Nahali, Kusunda and Vedda. Burushaski, which was traditionally viewed as a language isolate, but has been shown to be a member of the Karasuk language family, is distantly related to the Yeniseian languages.

The Indo-European family tree of Stammbaum has traditionally been emblematic of comparative linguistics. The family tree model is still a valid model of linguistic phylogeny, particularly with all of the qualifications and nuances which were already explicitly formulated from the earliest days of historical linguistics and later enhanced in the writings of Junggrammatiker, though these nuances have often been ignored by laymen as well as some linguists. Yet even the Indo-European family tree has come to look less like a tree today and increasingly resembles a bed of flowers sprouting forth from a common primordial substrate, despite the recognition of higher-order branches such as Indo-Iranian, Balto-Slavic and Italo-Celtic. Below family trees will be depicted of the three major language families which are either wholly or largely confined to the Indian subcontinent and the greater Himalayan region, namely Tibeto-Burman, Austroasiatic and Dravidian.

A situation exists in Tibeto-Burman which is comparable with the Indo-European model in that a number of higher-order groupings have been proposed, such as Sino-Bodic, but these will not be discussed here. Instead, the most empirically defensible picture of the language family is represented as a patch of fallen leaves on the forest floor, rather than as a tree. At the present state of the art, the branches of the tree cannot yet be clearly discerned, but the 'leaves' or subgroups which have fallen from the Tibeto-Burman tree have finally all been identified. As hitherto undescribed languages become grammatically and lexically documented in ever greater detail, we can
begin to make out the shadows which the branches of the family tree cast between the leaves on the forest floor. This picture of Tibeto-Burman is represented in Figure 4.1.

In Figure 4.1, this patch of leaves on the forest floor has fallen from a single tree, which we know as Tibeto-Burman. We cannot see the branches of the tree, but we are beginning to see the shadows they cast between the leaves on the forest floor. This schematic geographical representation provides an informed but agnostic picture of Tibeto-Burman subgroups. The extended version of the Brahmaputran hypothesis

![Figure 4.1](image)

In Figure 4.1, this patch of leaves on the forest floor has fallen from a single tree, which we know as Tibeto-Burman. We cannot see the branches of the tree, but we are beginning to see the shadows they cast between the leaves on the forest floor. This schematic geographical representation provides an informed but agnostic picture of Tibeto-Burman subgroups. The extended version of the Brahmaputran hypothesis includes Kachinic, but for the sake of argument this diagram depicts the short variant of Brahmaputran, i.e. excluding Kachinic. Kachinic comprises the Sak languages and the Jinghpaw dialects. Likewise, Tangut is separately depicted, although Tangut is likely to be part of Qiangic. Digarish is Northern Mishmi, and Mishmi is Southern Mishmi, i.e. the Kaman cluster. Daria is listed as a distinct group, whereas it may form a constituent of Sinitic, albeit one heavily influenced by Lolo-Burmese. Tujia is a heavily sinicised Tibeto-Burman language of indeterminate phylogenetic propinquity spoken by about 3 million people in an area which straddles the provinces of SiChuán, Húběi, Húnán and Guízhōu. The Sino-Bodic hypothesis encompasses at least the groups called Sinitic, Kiranti, Bodish, West Himalayish, rGyal-rongic, Tamangic, Tshangla and Lhokpu and possibly Lepcha. Other hypotheses, such as the inclusion of Chepang and perhaps Dura and Raij-Raute within Magaric, are discussed in the handbook (van Driem 2001).

Unlike Indo-European, the original Tibeto-Burman theory of language relationship was for a time eclipsed by other fanciful theoretical language families, which have since been shown to be without a sound empirical basis. These are the defunct 'Turanian' family and the obsolete 'Indo-Chinese' or 'Sino-Tibetan' family. The field has now returned to the original Tibeto-Burman model, which is defined as the family of languages comprising Tibetan, Burmese and Chinese and all languages which can be demonstrated to be genetically related to these three languages (Figures 4.2 and 4.3).

Currently, the most informed and authoritative Austroasiatic Stammbaum is the language family tree presented by Diffloth (2001, 2005), reproduced here. In Figure 4.2, the Austroasiatic family tree is presented with a tentative calibration of time depths for the various branches of the language family (Diffloth 2001, 2005). The precise phylogenetic propinquity of Pearic, after Khmeric loan layers have been stripped off, remains uncertain except that Diffloth observes that Pearic is Mon-Khmer and not 'une espece de vieux khmer', as earlier scholars once maintained. This diagram arranges in a tree-shaped phylogeny the fourteen recognised branches of Austroasiatic, i.e. North Munda, South Munda, Khaskan, Pakanic, Paluagic, Khmuic, Vietic, Katuic, Bahnaric, Khmeric, Pearic, Monic, Aslian and Nicobarese.

Austroasiatic splits up into three major nodes, i.e. Munda, Khas-Khmuic and a new 'Mon-Khmer'. In this new tripartite division, Munda is still one of the primary branches of Austroasiatic, representing the native heart of the Indian subcontinent. The Khas-Khmuic branch represents 'Inland Austroasiatic', and a more precisely delineated Mon-Khmer represents 'Littoral Austroasiatic'. The new Mon-Khmer comprises Khmero-Vietic and Nico-Monic. Each of the two sub-branches of Mon-Khmer is further subdivided, with Nico-Monic consisting of Asli-Monic and Nicobarese, and Khmero-Vietic breaking up into Veto-Katucic and Khmero-Bahnaric. The greatest genetic affinity of Pearic is not with the Munda or Khas-Khmuic branches, but with Mon-Khmer. A comparable picture is available of the structure and sub-grouping of the Dravidian language family. One of the better informed family trees is depicted in Figure 4.3. Yet the view diagrammed here is not the only version of the Dravidian language family, and some specialists prefer instead to group Brahui, Malo, Kurukh and perhaps Koraga together within a single North Dravidian branch. In Figure 4.3, the family tree of the Zagrosian or Elamo-Dravidian language family as envisaged by McAlpin (1981) represents the theory that the Dravidian languages are genetically related to Elamite. Another widely held view of the Dravidian language
family groups Brahui, Malto, Kurukh and perhaps Koraga together in a single North Dravidian branch.

The rugged alpine topography of the Himalayas has made the Indian subcontinent the ethnolinguistically most complex area in the world, rivalled only by New Guinea. In terms of antiquity of human habitation, one would expect Africa to be ethnolinguistically more complex, but much ancient diversity on the Dark Continent has in fact been wiped out by subsequent linguistic dispersals, such as the Bantu expansion. The inaccessibility of many recesses within the Himalayas and the remoteness of

![Figure 4.2 Austroasiatic with Gérard Diffloth's tentative calibration of time depths for the various branches of the language family (modified from Diffloth 2001, 2005). The precise phylogenetic propinquity of Paeitic, after Khmeric loan layers have been stripped off, remains uncertain except that Diffloth observes that Paeitic is Mon-Khmer and not 'une espece de vieux khmer', as earlier scholars once maintained. This diagram arranges in a tree-shaped phylogeny the fourteen recognised branches of Austroasiatic, i.e. North Munda, South Munda, Khasian, Pakanic, Palaungic, Khmuic, Vietic, Katuic, Bahnaric, Khmeric, Paeitic, Monic, Aslian and Nicobarese.]
Chomskyite formalism on the field of linguistics as a whole since the 1960s, leading to vast amounts of public and private funding and human resources being channelled away from research on languages. More recently, some funding bodies have undertaken to prescribe codes of conduct or research regimens. Linguists have been working on endangered languages for many decades, but now that ‘endangered languages’ has become a buzz phrase, there is also suddenly no shortage of people who would tell these linguists how precisely to go about conducting their work.

Where linguists have previously been working effectively, ethically and constructively with native language communities, now they will have to conduct their work with the meddlesome prompting of people sitting on the sideline. The codes of conduct currently being drafted have generally been inspired by the extreme situation which exists in North America and Australia, where colonial European populations have on a grand scale wiped out native peoples along with the languages they once spoke, and in their place set up modern Western societies with litigious Anglo-Saxon legal customs. The situation on the ground is already utterly different from one Asian country to the next. Therefore, codes of conduct inspired by the situation in North America and Australia are singularly inappropriate in other parts of the world. In practice, codes of conduct are more than superfluous, for they can actually hamper sound and ethical field research.

In a similar vein, in addition to conventional grammatical analysis and lexical documentation, it is helpful to document a language in the form of an audio recording. In fact, I have never met a field linguist who did not do this as a matter of course. Yet it serves no purpose to prescribe a format of audiovisual documentation to which the fieldworker must adhere in order to be eligible for funding. Recruiting a capable field linguist willing to document endangered languages is already a big challenge. Most people trained in linguistics are either not up to the task or unwilling to suffer the discomfort or brave the dangers involved. Putting extra hurdles in place, however well intentioned, merely obstructs the documentation of what remains of humankind’s endangered linguistic heritage.

**Endangered language isolates of the Indian subcontinent**

Each of the languages endangered with extinction discussed in this section represent so-called language isolates, i.e. languages which have not been demonstrated to belong to any other major language family or linguistic phylum. There is a theory connecting the Nahali language to Austroasiatic, although even this theory recognises that Nahali, if Austroasiatic, would constitute the only representative of its own distinct major branch of this large linguistic phylum. The Karasuk theory, advanced by myself on the basis of specific morphological evidence, holds that Burushaski forms a language family together with the Yenissian languages.

**Andamanese languages**

All native languages spoken by the indigenous negrito peoples of the Andaman Islands are either extinct or threatened with imminent extinction. As a result of British colonial policies, just three of over a dozen native languages of the Andamans were driven extinct, along with the people who spoke them. The three surviving Andamanese languages are Ōnge, spoken on Little Andaman, Sentinelese, spoken on North Sentinel Island, and Jarawa, spoken in the interior of South Andaman. The 1981 census enumerated thirty-one speakers of Jarawa, ninety-seven speakers of Ōnge, and a comparatively small Sentinelese language community holding out on Sentinel Island. No reliable recent data are available. Historically the Andamanese used to give outsiders visiting the islands a hostile reception, but in view of their tragic history the prompt slaying of outsiders was in retrospect the best policy that the Andamanese could have had. Since the beginning of the twentieth century, Urdu or Hindi had established itself as the dominant language because it was the *lingua franca* between the inmates of the penal colony established on the Andamans by the government of British India. Today Bengali, Tamil, Malayalam and Telugu are also significant minority languages spoken by the colonists who have settled the islands.

**Vedda**

The earliest Western account of the aboriginal Veddas of Ceylon and their language was written by Ryklof van Goens of the Dutch East India Company in 1675. Subsequently most Veddas were assimilated by the Tamil and Sinhalese speaking populations of the island, both linguistically and through acculturation and intermarriage. Policies implemented by the Ceylonese government in the 1950s and 1960s led to the displacement, fracturing and impoverishment of the last remaining Vedda language communities. The individuals who survived the devastation of their communities have been absorbed into modern Sinhalese society in terms of both lifestyle and language. It is not known whether there are still any surviving speakers of the original, albeit heavily Indo-Aryanised Vedda language, but the places to look would be at the Mahaweli Vedda Settlement Area at Hennangala on the Kudu Oya, or in isolated households around either Dambana or Polonnaruwa. The Rodiya language, another language of Ceylon, is almost certainly extinct.

**Nahali**

The Nahali are mainly settled in and around the Gawilgarh Hills south of the Tapti river in Nimar and Ellichpur Districts of Madhya Pradesh, especially around the village of Tembi 40km east of Burhanpur. The Gawilgarh Hills form part of the Vindhya and Satpūḍā chain, which separates the Deccan Plateau from the Gangetic plain. There are less than 2,000 speakers of Nahali. The Nahali language – also written as Nihali or Nehali – has been heavily influenced by the Austroasiatic language Korku. It should be possible to do fieldwork using Hindi as the contact language.

**Kusunda**

Kusunda is the language of an ancient aboriginal relict group of Nepal. The four remaining Kusunda clans, which designated themselves by the Indo-Aryan names of Simha, Sān, Sāhu and Khān, split up in the middle of the twentieth century. Kusunda speakers could still be found in the 1960s and 1970s, but the remaining Kusunda are generally individuals which have married into a sedentary agriculturist community. Several individuals are known to remember the language of their parents, though none speak Kusunda as the language of daily communication. Individual Kusunda are
known to be found around Damauli and near Gorkha in central Nepal as well as further west in Dāṅg and Surkhet. For those interested in finding the last speakers, more detailed clues and reports on their possible whereabouts are given in my handbook (van Driem 2001).

**Burushaski**

Burushaski is spoken in the high alpine valleys of Hunza-Nagar and Yasin in northern Pakistan by about 80,000 people who call themselves Burūsho and their language Burūšaski. Some 50,000 Burūsho live in Hunza and Nagar and some 30,000 live in Yasin. A considerable Burūsho population has also settled in Gilgit itself. The Burūsho area is surrounded on all sides by tracts of land where Iranian, Indo-Aryan, Turkic and Tibetan languages are spoken. The Burūsho for centuries enjoyed a high degree of local autonomy. In 1891, Hunza was conquered by the British after a bloody three-day struggle, and in 1947 the region became part of Pakistan. In 1972 President Bhutto abolished the autonomous Nager kingdom, and in 1974 the kingdom of Hunza was abolished. Between 1964 and 1968 the Karakoram highway was built, which has rendered the area easily accessible to outsiders. In addition to many older Sinh loans, Burushaski has become swamped with Urdu and English loan words. Bilingualism has led to the attrition of native morphosyntactic complexity in the speech of the younger generation. In 1992, Hermann Berger predicted that at the present rate of assimilation the language would be fully extinct within several decades.

**Endangered Austroasiatic languages of the Indian subcontinent**

The Austroasiatic language family is the most ancient linguistic phylum of mainland South and Southeast Asia. With the exception of the four languages Khmer, Vietnamese, Khasi and Santhal, each of the over two hundred Austroasiatic languages is threatened with extinction. Even the Mon language, which has an impressive and literary tradition dating back to the seventh century, is threatened with imminent extinction. The Austroasiatic languages of South Asia are the Nicobarese languages of the Nicobar Islands, Khasi and the Munda languages of the Indian subcontinent.

**Nicobarese languages**

Over 20,000 people presently inhabit the Nicobar Islands, but not all of these speak a native language of the Nicobar Islands. The precise linguistic situation on the Nicobars is currently kept hidden from the scrutiny of foreign scholars by the Indian government. The names and locations of the language communities are known, however. Pū is spoken on Car Nicobar Island, Tatet on Chowra Island, Tuhlong on Teressa Island, Powahat on Bompoka Island, Nancowry on the islands of Nancowry and Camorta, Lāṭūl on Trinakut Island, Tēhū on Katchal Island, Lo’ong along the coast of Great Nicobar Island, Ong on Little Nicobar Island, Lāmōnghī at Condul, and Mīlōh at Milo. The language known as Geta?, Gta?, Dideyi or Didam has about 80,000 speakers on the Netarhat plateau in southern Bihar. Bhumij may have as many as 200,000 speakers in scattered communities in Orissa, West Bengal, Bihar, Assam and Madhya Pradesh. The language known variously as Sora, Saora or Sawara has over 300,000 speakers in the Koraput and Gaṅjām districts of southern Orissa and in neighbouring parts of Andhra Pradesh. Pareng or Gorum is spoken by approximately 10,000 people in Nandpur and Poṭnāṅgāl tālukan in Koraput. Remo or Bonda has approximately 2,500 speakers in the Jaya pur hills of Koraput. Gubot or Sodia (also known as Gadaba, but not to be confused with the Dravidian language also named Gadaba) has just over 40,000 speakers in Kalāḥāndi, Koraput, Viṣaṅkāpanam and Bastar districts. The language known as Geta?, Gta?, Dideyi or Didam has about 3,000 speakers in the hills and plains on either side of the Sileru river in East Godāvāri district of Andhra Pradesh.

**South Munda languages**

The Munda languages are divided into a southern and a northern branch. Despite the large number of speakers of a few of the Munda languages, bilingualism is widespread. At the present breakneck speed of assimilation, most Munda languages will not survive to the end of this century. All Munda language communities are under heavy demographic and socio-economic pressure to assimilate linguistically to the local Indo-Aryan majority language. We shall turn to the South Munda languages first. Juang has approximately 17,000 speakers in the Kyonjhar and Dhēkānāl districts of Orissa. The Kharia dialects have over 190,000 speakers, concentrated mainly in the Chotā Nagpur, especially in Rāṅcī district of Bihar, and in scattered communities in Orissa, West Bengal, Bihar, Assam and Madhya Pradesh. The language known variously as Sora, Saora or Sawara has over 300,000 speakers in the Koraput and Gaṅjām districts of southern Orissa and in neighbouring parts of Andhra Pradesh. Pareng or Gorum is spoken by approximately 10,000 people in Nandpur and Poṭnāṅgāl tālukan in Koraput. Remo or Bonda has approximately 2,500 speakers in the Jaya pur hills of Koraput. Gubot or Sodia (also known as Gadaba, but not to be confused with the Dravidian language also named Gadaba) has just over 40,000 speakers in Kalāḥāndi, Koraput, Viṣaṅkāpanam and Bastar districts. The language known as Geta?, Gta?, Dideyi or Didam has about 3,000 speakers in the hills and plains on either side of the Sileru river in East Godāvāri district of Andhra Pradesh.

**North Munda languages**

Santhali or Santali is the only Munda language community with millions of speakers that may be large and resilient enough to resist the forces of linguistic assimilation in the course of the present century. Korku, the westernmost Munda language, has approximately 200,000 speakers in southwestern Madhya Pradesh and neighbouring parts of Maharashtra, especially in the Satpūrā range and Mahādev hills. The diverse Mūṇḍārī or Ḥo ḍialects, including Hasada?, Naguri, Latar and Kera?, together have approximately 750,000 speakers in the districts Rāṅcī, Simhabhūm, Manbhūm, Hazāribāg and Palāmū of Bihar and in northern Madhya Pradesh and Orissa. Ho or Kol has just over 400,000 speakers in Simhabhūm district in Bihar. Bhumi may have as many as 150,000 speakers in scattered communities in Bihar, Orissa and Madhya Pradesh. The language of the nomadic Birhors is moribund, with less than two thousand speakers in Simhabhūm, southern Palāmū, southern Hazāribāg, and northern and northeastern Rāṅcī. The Koḍa dialects, which have been utterly neglected by scholars and evangelists alike, are spoken by about 25,000 people in scattered enclaves throughout the Chotā Nagpur. Turi is spoken by several thousand people living as small artisanal groups in West Bengal, Palāmū, Rāṅcī, Simhabhūm, Rāygaḍh and Chhattisgaḍh. The Asur dialects count some 7,000 speakers on the Netarhat plateau in southern Palāmū and northern Rāṅcī as well as further south around Gümūli. The dialects collectively referred to as Korwa, Koroa or Ernga together have over 35,000 speakers in the Jāspurnagar tahsil of Rāygaḍh.
district and in Sarguja district of Madhya Pradesh and in Pašmū and Hazārībāg districts of Bihar.

Endangered Dravidian languages of the Indian subcontinent

Other than the four major Dravidian languages Kannarese, Tamil, Malayalam and Telugu, most minor Dravidian languages are spoken by small tribes and have not been systematically committed to writing. Kannarese, Tamil and Malayalam are South Dravidian languages. Telugu is the only Central Dravidian language not threatened with extinction.

South Dravidian languages

Irula, Toda, Kota and Badaga are minor South Dravidian languages spoken in the Nilgiri Hills in the west of Tamil Nadu. Of these Irula, Toda and Kota are most closely related to Tamil and Malayalam, whereas Badaga can be said to be a major variant of Kannada. Irula has only about 5,000 speakers. Kota and Toda are each spoken by about 1,000 people. Kota, in the Köttagiri portion of the Nilgiris, and Toda in the vicinity of Udagamānjaḷam or ‘Ootacamund’, affectionately known as ‘Ooty’. Although a close relative of Kota, Toda is aberrant and is said to have non-Dravidian features. Badaga has over 100,000 speakers. Another relative of Tamil and Malayalam is the Koḍāguan language, spoken by about 100,000 speakers in the ‘Coorg’ or Koḍāgu district of Karnataka in the vicinity of ‘Mercara’ city or Maḍkeri. Tuḻu is a totally distinct South Dravidian language with over a million speakers around the coastal city of Mangalore or Maṅgalīru and along the coast from Kāsargōdu in Keralā up as far as North Kanārā district in Kārnātaka. Tuḻu is written in an adapted form of the Grantha script, like Malayalam, and schoolbooks and Bible translations have been printed in Tuḻu since 1842. The Kuruva language is spoken by the thousand or so members of the Betti-Kuruva tribe in the hilly parts of Coorg. The Betti-Kuruva tribe constitute merely one tenth of all ethnic Kuruva, for other Kuruva tribes have adopted Kannada. The Koraga and Bellari languages each have roughly 1,000 speakers in the area around Kündāppura or ‘Coondapoor’ and Uḻupi or ‘Uḍipi’ in South Kanārā district of Karnataka. The recently discovered Koraga language is spoken by untouchables who are bilingual in Kannada. Kurru (including Kora, Yerukula, Yerukala and Kaikudi) is spoken by an estimated 100,000 nomadic tribesmen in Andhra Pradesh and neighbouring portions of Karnataka and Tamil Nadu.

Central Dravidian languages

Central Dravidian comprises the minor languages of the Telugu-Kuí group (Gōḍī, Koṇḍa, Māṇḍa, Pengo, Kūvi and Kuí) and the Kolami-Pariji group (Kolami, Naikri, Naiki, Gadaba and Pariji). Over two million speakers of Gōḍī, who call themselves either Kói or Kōya, live in scattered communities in Madhya Pradesh, Maharāṣṭra, Orissa and the north of Andhra Pradesh. Koṇḍa or Kūbi is spoken by the more than 15,000 members of the Konda Dora tribe in the districts of Viśākhāpataṃ and Śrīkākālum in Andhra Pradesh and the neighbouring district of Koraput in Orissa. Māṇḍa and Pengo are spoken in Korāpūṭ and Kaḷāṅḍi districts in Orissa by an estimated 1,500 speakers. The languages Kūi or Kūzi and Kuvi are spoken by more than half a million members of the Kondho (also Kondh, Kandh or Khond) tribes in Gāttām, Kalāṇḍi, Baudh-Kondhamal and Koraput districts in Orissa and in Viśākhāpataṃ district in Andhra Pradesh. Christian missionaries have printed religious tracts in Kūi and Kuvi using the Roman and Oriya scripts. Kolami is spoken by about 70,000 people in the hills of Yavatmāl and Vardhā districts in Maharāṣṭra and in Adilābī district in Andhra Pradesh. An estimated 1,500 Yerukal tribesmen in the hills of Canda district in Maharāṣṭra speak the related language Naiki. There are roughly 50,000 speakers of Pariji in Bastar district in Madhya Pradesh in the vicinity of Jagadalpur. In neighbouring Koraput district in Orissa, there are roughly 40,000 speakers of the various dialects of Gadaba, not to be confused with the Munūḍā language of the same name, currently more usually called Gutob.

Northern Dravidian languages

The Northern Dravidian languages are all minor languages, i.e. Brahui, Malto and Kurukh. Brahui [bra?u] is spoken in Pakistan, mainly in Kalat and the adjacent districts of Hyderabad, Karachi and Khairpur, and in small communities in adjacent portions of Afghanistan and Iran. The language is spoken by about half a million members of the so-called indigenous Brahui tribes of the Kalat, the Sarawan tribes north of the Kalat and the Jhalawan tribes south of the Kalat. Brahui has been a written language for over three centuries, but a truly flourishing literary tradition has never developed. Brahui, like the Indo-Aryan language Urdu, is written in an adapted form of the Persian script. Traditionally, Brahui is considered to be either a separate branch of Dravidian or a member of North Dravidian alongside Malto and Kurukh. More than 100,000 people speak the Dravidian language of Malto, mainly in the Rāmpāḷ Hills of central Bihar.

Kurukh, also written Kurux, and also known as Oraon or Uraon, is spoken by roughly 1.5 million speakers, mainly in the hill tracts of the Choṭā Nāgpur in the states of Bihar, Madhya Pradesh, Orissa and West Bengal but also in scattered communities elsewhere in these states and even as far east as Assam and as far north as the foot of the Himalayas in the eastern Nepalese Terai, where about 15,000 people speak the Dhangar and Jhangar dialect. There are also a few scattered Uraon settlements on the Indian side of the Indo-Bhutanese border at intervals from the area south of Samtsi in the west to the area south of Sandrup Jongkhar in the east. Moreover, scattered Uraon communities are found throughout Assam, where they are referred to as ‘Adi­basis’, and so lumped together with the various linguistically unrelated Austroasiatic Munūḍ groups with whom they share their geographical provenance and their dark, at times nearly negroid appearance. The term Ādvāstä used in northeastern India literally means ‘aboriginal’, but, ironically and confusingly, the groups thus designated are, in fact, not aboriginal to northeastern Indian, but aboriginal to the Choṭā Nāgpur.

Endangered languages of Bhutan and Sikkim

The contrast between Bhutan and Sikkim in terms of the language endangerment situation could not be greater. With the possible exception of Singapore, Bhutan is the most anglophone country in all of Asia. The position of English in education,
government and daily life is such that even Dzongkha itself, the national language which is actively propagated by the Royal Government of Bhutan, occupies a precarious position alongside English. On the other hand, the Royal Government of Bhutan fosters a policy of studying, documenting and preserving the native languages of the country as part of the national cultural heritage. Sikkim, on the other hand, has been swamped by colonists from Nepal and lost sovereignty in 1975 when it was annexed by India. The indigenous population groups of Sikkim, the Lepcha and the Dränjop, have been reduced to a minority of less than 10 per cent in their own native homeland. Nepali, an allochthonous language, has expanded in Sikkim to the detriment of all native languages, and Nepali has also made inroads into Bhutan. In comparison with Sikkim and Nepal, the sociolinguistic situation in Bhutan is characterised by far greater stability. In Bhutan, languages under threat are faced with encroaching endangerment and gradual extinction, but not with the cataclysmic upheaval and immediate endangerment which threatens almost all of the native language communities of Nepal. The only exception is Lhokpu, the most endangered language in Bhutan, which is threatened by linguistic assimilation to the surrounding communities of Nepali colonists in southwestern Bhutan. Here too Nepali is spreading at the expense of a native language. The least endangered language in Bhutan is the Tshangla or Shachop language. Tshangla is a Tibeto-Burman tongue which constitutes a subgroup in its own right, spoken by a highly robust language community native to the eastern part of the kingdom. A Tshangla dialect is also spoken in an enclave around Pemakô, further east on the Indo-Tibetan border.

**South Bodish languages**

The four South Bodish languages are Dzongkha, Drânjoke, J’umowa and Cho-ca-ngac-ka. Dzongkha is the national language of the kingdom of Bhutan, but is actually native to just eight out of twenty districts, all located in western Bhutan. Propagation of a standard form of the language highly influenced by the Classical Tibetan liturgical language or ‘Chôkê’. The preeminent role of English in Bhutan threatens Dzongkha even though there are an estimated 160,000 native speakers of the language. The normative influence of Chôkê threatens authentic grassroots forms of Dzongkha.

The sister language of Dzongkha, Drânjoke, used to be the national language of the Kingdom of Sikkim. However, since before Sikkim was annexed by India in 1975, the land has been overwhelmed by a Nepali-speaking immigrant population which now constitutes over 90 per cent of the populace. As a result, young Drânjop are almost all raised in Nepali, and Drânjoke is now moribund.

J’umowa is spoken in the southernmost portion of the Chumbi valley, a sliver of former Sikkimese territory which was ceded to Tibet and is now wedged in between Sikkim and Bhutan. The Chumbi valley is known in Tibetan as Gro-mo or ‘Dr’ormo’ and in Dzongkha as Gyu-mo or ‘J’umo’. The English name for the Chumbi Valley is derived from the genitive adjectival form Jumbi, ‘of or pertaining to the Chumbi valley’. Based on the Tibetan pronunciation of the valley, the language is also known as ‘Trumowa’ or ‘Dr’ormowa’. This language, only spoken in the lower portion of the valley, is now moribund. Cho-ca-ngac-ka is spoken by approximately 20,000 speakers in Monggar and Lhüntsi districts on both banks of the Kurichu. This language is under threat from Tshangla and Dzongkha. The closeness of Cho-ca-ngac-ka to Dzongkha means that assimilation to the Bhutanese national language is an easy process which involves the language being shorn of all its most interesting features, some of which are Kurichu linguistic substrate traits.

**East Bodish languages**

The East Bodish languages are the most archaic branch of Bodish, more conservative in some respects than Old Tibetan. East Bodish comprises Dakpa, Black Mountain, Bumthang, Kurtop, Kheng, Nupbikha, ‘Nyenkha, Dzala and Chali. Of these languages, four can be seen as dialects of a single Greater Bumthang language, i.e. Bumthang, Nupbikha, Kheng and Kurtop. Yet all the other East Bodish languages are quite distinct, and their diversity reflects a great time depth. The particular language endangerment situation of Bhutan has already been discussed above in light of the country’s relative sociolinguistic stability.

Bumthang is the native language of Bumthang district in central Bhutan, where four dialects of the language are spoken by an estimated 30,000 people. The dialect spoken in Trongsa is called Nupbikha ‘language of the west’, i.e. west of Bumthang. Kheng is the language of an estimated 40,000 people in Kheng district, now also known as Zh’angang, south of Bumthang in central Bhutan. Kurtop is spoken by approximately 10,000 people in Lhüntsi district, to the west of the Kurichu all the way north to the Tibetan border. The Kurtop area is therefore east of the Bumthang area, whilst the Kurichu separates the Kurtop area from the Dzala language area of northeastern Bhutan.

The other East Bodish languages are all quite distinct languages. ‘Nyenkha is also known as Henkha, but the most popular name is probably Mangdebi-kha because this highly divergent East Bodish language is spoken by an estimated 10,000 people in the Mangde river valley. Chali is spoken by about a thousand people in a small enclave north of Monggar on the east bank of the Kurichu, consisting mainly of Chali itself and neighbouring Wangmakhar. Dzala is spoken by about 15,000 people in northeastern Bhutan in Trashiyangtse district and in Lhüntsi district east of the Kurichu. Chinese sources have reported over 40,000 speakers of the same language in the portion of Tibet just north of northeastern Bhutan and the adjacent part of Arunachal Pradesh. Dakpa is spoken by a few thousand people in Tongsa, which now makes up the northwestern corner of Arunachal Pradesh, and in a few villages in eastern Bhutan abutting Tongsa. The Black Mountain language is spoken by about 500 people in six different villages scattered throughout the southern jungle heartland of the Black Mountains in central Bhutan. This language is decidedly the most divergent and aberrant of all East Bodish languages. The language may, in fact, not be East Bodish at all, but represent another Tibeto-Burman language on its own which has been extensively relexified by East Bodish.

**Lhokpu**

Lhokpu constitutes a group unto itself within the Tibeto-Burman language family. The Lhokpu language is spoken in the hills of Samtsi District in southwestern Bhutan in two distinct language communities. The robust western community in the hills one day’s march to the northwest of Samtsi bazaar comprises approximately 1,340 speakers in the villages of Sanglung, Sataka and Loto Kucu and Lotok. The eastern community comprises approximately 1,270 speakers in Taba, Dramte and several associated hamlets near Jenchu, upstream from the town of Phentsho’ling on the Indo-Bhutan
border. Language retention is better in the western community because there are fewer Nepali settlements nearby. The entire Lhokpu population is effectively bilingual in Nepali, and most of the hill tracts of southwestern Bhutan as well as a portion of the western Bhutanese duars used to be Lhokpu territory. The Royal Government of Bhutan has recognised the urgent language endangerment situation of the Lhokpu due to the influx of Nepali settlers into their traditional homeland, and Lhokpu is currently being grammatically and lexicographically documented under the auspices of the Royal Government of Bhutan.

Lepcha

The Lepcha have their own indigenous script and a literary tradition which dates back to the early eighteenth century. Lepcha is the language of the original populace of Sikkim. The kingdom of Sikkim once comprised present-day Sikkim as well as most of the present-day Darjeeling District. Outside of this area, Lepcha is also still spoken decreasingly within roughly 100 Lepcha households in Ilam district in eastern Nepal. The language is also spoken in Kalimpong or ‘British Bhutan’, i.e. the territory wrested from Bhutan which now forms the easternmost part of Darjeeling District. Lepcha is furthermore spoken in a few Lepcha villages in Samtsi District of southwestern Bhutan. Zongu District in Sikkim is the only remaining area where the Lepcha have not been outnumbered by Nepali colonists. The entire Lepcha area is bilingual. Despite spirited attempts to preserve the language, Lepcha has already effectively been lost everywhere in favour of Nepali. There are very few remaining households where the younger generation actively speaks the language, and these households are few and far between. The total number of fluent Lepcha speakers does not exceed a few thousand.

Gongduk

Gongduk is a previously unknown Tibeto-Burman language which was first discovered for scholarship in May 1991. The language, which has turned out to constitute a distinct and unique branch unto itself within the great Tibeto-Burman language family, is spoken by a dwindling population of just over 1,000 people in a remote enclave along the Kurichu in Monggar district in east-central Bhutan. Gongduk is one of the two languages in Bhutan which has retained complex conjugations which reflect the ancient Tibeto-Burman verbal agreement system. The language community has survived intact for so long because of its remoteness and the relative general stability of language communities in Bhutan over time. Whereas some language communities are remote in the sense that they are many days on foot from a motorable road, the Gongduk-speaking enclave has until recent historical times also been several days on foot from the nearest neighbouring language communities. This means that travellers had to carry their own provisions and sleep outdoors to reach the Gongduk area. This still holds true for two of the three approaches to the language community. Yet Bhutan has been transformed in recent decades by a network of narrow but motorable roads and a growing infrastructure of educational and health care facilities set up by a caring central government. The Gongduk language community is opening up to the outside world, and a growing staff of civil servants who do not speak the language are now stationed there on a semi-permanent basis. Although there is still a fair number of genuine monolinguals, the situation is rapidly changing, and the future prospects for the survival of Gongduk are not good. The Royal Government of Bhutan has recognised the urgent language endangerment situation of the Gongduk, and the language is currently being grammatically and lexicographically documented under the auspices of the Royal Government of Bhutan.

Endangered languages of Arunachal Pradesh

The Kho-Bwa languages

The four languages of the enigmatic Kho-Bwa cluster in western Arunachal Pradesh, just east of Bhutan, are all threatened with imminent extinction. These are Khowa or Bugun, Sulung or Puroit, Lishpa and Sherdukpen. Khowa is spoken by an estimated 800 people, more than half of whom reside in the two villages of Wanghoo and Singchung near the district headquarters at Bomdila in West Kameng district. Sulung is spoken by about 4,000 people, half of whom inhabit a small area which straddles the northeastern hills of East Kameng and the northwestern hills of Lower Subansiri district. In this area, they occupy the northern and more inaccessible parts of the upper reaches of the Par river. The Sulung have been compelled to lead a semi-nomadic existence because they were lowest in the pecking order established by the perennial internecine tribal warfare traditionally waged in the region. The Sulung were often enslaved by rival groups. Therefore, their actual area of dispersal extends from the Bhareli river to the Subansiri, and small settlements of Sulung are interspersed with the villages of more numerous groups such as the Tani and Hruso. Lishpa is spoken by about 1,000 people in Kameng district who pass themselves off as ‘Monpa’. Sherdukpen is spoken by less than 2,000 people who live mainly in the villages of Rupa, Shergaon and Jigaon in the southwestern corner of Kameng district, but are also settled in the area in and around the Tenga valley south of Bomdila. Culturally the Sherdukpen are distinct from the other Kho-Bwa language communities because they have adopted a Tibetan Mahayana Buddhist Hochkultur.

Hrusish languages

All three Hrusish languages are endangered with imminent extinction. The Hruso or ‘Aka’ population is estimated at less than 3,000 speakers. The Hruso live in the southeast of Kameng, where they are concentrated in the Bichom river valley. Like the Bhutanese to the west and the neighbouring Nishi tribes to the east, the Hruso or Aka have historically observed the practice of raiding the plains to take back slaves to the hills. Dhimmai or ‘Miji’ is still spoken by about 4,000 people. The Dhimmai inhabit about twenty-five villages and hamlets in the northeastern and north-central region of Kameng, i.e. in the Bichom river valley to the north of Hruso territory and also in the Pakesa river valley. There are only about 1,000 speakers of Levai or ‘Bongro’, who live in Kameng and also part of Subansiri.

Tani languages

Tani languages, formerly known as ‘Abor-Miri-Dafla’ languages, are spoken by the many Adi and Nishi tribes and a few other groups such as the Milang which are not
thus classified. An estimated 5,000 speakers of Milang live on the eastern fringe of the Tani area, abutting the territory of the Idu Mishmis. The Milang inhabit the three villages of Milang, Dalbing and Pekimodi in the upper Yamne valley in Maryang subdivision of East Siang district.

Bangni, Nishi, Tagin and Apatani form a cluster. Bangni, traditionally known as Western Dafla, is spoken by roughly 23,000 people. In the north, the Bangni area straddles the Indo-Tibetan border. Nishi, formerly known as Eastern Dafla, is spoken by roughly 30,000 people. Nah is spoken in just seven villages of Taksing administrative circle in Upper Subansiri district. Sarak or ‘Hill Miri’ is spoken just east of the Apatani area by an estimated 9,000 people. An estimated 25,000 Tagin inhabit the northeastern quadrant of Subansiri district and Subansiri and adjoining parts of West Siang, including the towns of Denekoli and Taliha. The Tagin were driven to their present abode by the bellicose Pailibo and Ramo tribes. Apatani is the most divergent member of the Nishi group and has been exposed to the most Tibetan influence. An estimated 14,000 Apatani inhabit an enclave in the fertile valley of the Apatani plateaux in lower central Subansiri district, between the Nishi and Hill Miri, midway between the Panier and Kmla rivers.

Gallong, Bokar, Pailibo and Ramo form a cluster. Gallong, one of the two Tani languages which is endangered but not threatened with immediate extinction, is spoken by approximately 40,000 people in the southern half of West Siang district as far down as where the plains of Lakhimpur District begin in Assam. The largest Gallong village is Bagra with a population exceeding 3,000 near the West Siang district headquarters at Along. Approximately 3,500 speakers of Bokar live in forty villages in the Monigong Circle of Machukha subdivision in West Siang district just below the peaks of the Indo-Tibetan border, as well as in several villages on the Tibetan side of the ridge. Just over a thousand speakers of Pailibo live along the banks of the Siyom or Yomgo river, in nine villages in the Tato Circle and two villages in the Payum circle of West Siang district. Less than 800 speak Ramo in the upper Siyom valley in Mechukha subdivision of West Siang district to the northwest of the Pailibo area. Exclusively Ramo villages are located between Machukha and Tato, whereas elsewhere Ramo are mixed with Bokar and Memba settlers.

The remaining languages belong to the Minyong-Padam cluster, although nothing is in fact known about the Ashing language except its name. Its inclusion, therefore, is just a matter of geographical convenience. Whereas Padam is one of the two Tani languages which is endangered but not threatened with immediate extinction, Tagtam is nearly extinct because most of the people who spoke the language became the victims of genocide. The endangerment situation therefore varies widely from language community to language community. Approximately 20,000 speakers of Minyong occupy the swathe of territory along the west bank of the lower Siang river, downstream of the Bori and Karko language communities and to the east of the Gallongs. Not much more than 2,000 speakers of Bori are settled along the Siyom and Sike rivers in an area enclosed by the Luyor hills on the east, the Piri hills on the west and on the north by the closing together of these two ranges. The totally undocumented Ashing language is spoken by less than 1,000 people who inhabit the northernmost headwaters of the Siang river near the Tibetan border, beginning from the village of Ramising in the south and extending up as far as Tutig village in the north. Pango and Bomdo are the most numerous Ashing settlements. An estimated 2,000 speakers of Shimong remain on the left bank of the Siang in the northernmost portion of what used to be known administratively as the Siang Frontier Division. Yingkiong is the administrative centre in the Shimong area. Less than 200 speakers of Tangam remain in the northernmost portion of Siang district inhabiting the three villages of Kaging, Nering, Mayum and a few neighbouring hamlets in the northeastern corner of the Adi tribal region of Arunachal Pradesh, along the upper reaches of the rivers Siang and Nyong. The Tangam were once numerous but were killed en masse by neighbouring tribes. Karko is spoken by a small tribe of just over 2,000 people found mainly in Karko village and surrounding hamlets, such as Ramising and Gossang. About 600 speakers of Panggi live in the lower Yamne valley above the confluence of the Yamne and the Siang, in the villages of Geku, Sumising, Sibum, Jeru and Pongding. Padam, formerly known as the ‘Boor Abor’ or ‘Great Abor’, is spoken by probably over 40,000 people in the tract of land between the Dibang, Siang and Yamne valleys in East Siang, from the Assam border in the south to the Sidip river in the north. Mishing or ‘Plains Miri’ is spoken by less than 4,000 Hinduised people living in scattered settlements on the plains closely skirting the hills of Arunachal Pradesh. All the language communities of Arunachal Pradesh are threatened by Hindi, which has been propagated in the area by the government of India since the 1970s.

Midžužiš languages

The Midzužiš languages are referred to in older writings by the antique term ‘Northern Mishmi’. The two Midzužiš languages, Kaman and Zaiwa, are both endangered. Approximately 9,000 people speak Kaman or ‘Miju Mishmi’ along the upper reaches of the Lohit on both banks of the river around Parsuram Kund in Lohit district, and across the border in Tibet. Less than 200 people of the Zakhring and Meyor clans speak the Zaiwa language in the vicinity of Walong. This ‘Zaiwa Mishmi’ is not to be confused with the utterly different Burmese language also named Zaiwa, which is spoken in parts of Yunnan and Burma.

Digarish languages

The two Digarish languages, Idu and Taraon, are both endangered with imminent extinction. There are only an estimated 9,000 speakers of Idu, once known as Chulikata ‘cropped hair’ Mishmi. An estimated 6,000 speakers of Taraon are concentrated in the area between the Delei and Lati rivers in the east, the Karam in the south and the Digaru in the west.

Endangered languages of the Brahmaputran Plain and associated hill tracts

Brahmaputran is a major trunk of the Tibeto-Burman language family, comprising the three branches Konyak, Bodo-Koch and Dhimalish, and may include a fourth branch, Kachinic or Jinghpaw. The Kachinic languages are all endangered, not only by Mandarin, Burmese and Assamese, but also by the Jinghpaw creole which is used as a lingua franca between diverse Kachinic language communities. This form of Jinghpaw has been grammatically simplified and is shorn of the native morphosyntactic
complexity which characterises the various local grassroots Jinghpaw languages. More information on the Jinghpaw languages can be found in Chapter 5 on Southeast Asia. The Bodo-Koch branch of the Tibeto-Burman family consists of Chutia, Bodo-Garo and the Koch languages. A number of Bodo-Koch languages mentioned and even scantily documented in British sources in the nineteenth and twentieth century have since then become extinct, e.g. Hajong.

**Deori Chutiya**

There was once a large number of ethnic Chutiya, but the only group that had retained the original language at the dawn of the twentieth century was the priestly Deori clan, who formerly officiated at sacrificial ceremonies for the Ahom kings. The 1971 census only counted 2,683 ethnic Deori in Arunachal Pradesh and 9,103 Chutia in Assam. Today there are reportedly only a few households in Lakhimpur and Sibsagar districts of upper Assam who still speak the language, and one would have to make an effort to locate them.

**Bodo-Garo languages**

The Bodo-Garo cluster consists of Kokborok, Tiwa, Dimasa or 'Hills Kachari', Hojai, 'Plains Kachari', Bodo, Mech and Garo. The most divergent languages within this cluster are believed to be Dimasa, Tiwa and Kokborok. Dimasa is hardly documented and today very much under threat of extinction. The Dimasa live in the northern Cachar hills and portions of the adjacent plains, where they have largely been linguistically assimilated to their Bengali and Assamese neighbours. Dimasa is only spoken in isolated households, and local sleuthing would be required to find them. There is no description of Hojai, but old sources suggest some affiliation with the Dimasa. Dimasa and Hojai are distinct from Plains Kachari, but the speakers of all three dialects refer to themselves as 'Bodo'. Plains Kachari or simply Kachari is the dialect spoken in Darrang district, upriver from Bodo proper and downriver from the Assamese districts of Goalpara and Kamrup and in Mymensing District of Bangladesh, which all skirt the Garo Hills. Some Garo even live further south in the Bangladeshi hinterland, e.g. about 15,000 in Modhupur.

**The Kohch languages**

The Kohch languages are Pânî Koch, A'tong, Ruga and Rabha. Koch proper is still spoken by only approximately 300 people along the western fringe of the Garo Hills near Dau in the vicinity of Garobadh. The speakers are known as Wanang or Pânî Koch 'Water Koch'. Several thousand speakers of A'tong live in the southeast of the Garo Hills and reside in and around Somasvari and Bāghmārā. The A'tong speak a Koch language, but identify themselves as 'Garo' and are already bilingual in their native A'tong and in Garo. The Ruga or Rugḥa are a small group in the south of the Garo Hills. No data are available on the number of Rugha speakers. The Rabhas inhabit the territory where the Brahmaputra meanders around the highlands of the Meghalaya and bends south towards the Bay of Bengal after flowing westward across the plains of Assam. The prehistoric Rabha ethnic area may originally have extended as far east as Guwahati. There are at least 150,000 ethnic Rabha in Assam, and in 1993 the Rabha Hasong Demand Committee even put the number of ethnic Rabha as high as 375,000. Yet there are no more than several thousand speakers of the Rabha language. Most Rabhas speak Bengali or Assamese. Rabha is only still actually spoken in a number of villages in Goalpara District between Golāpārā proper and Phulbārī, including Bārdāmāl, Māṭā, Majerburī and Mākuri. However, even here the younger generation is already fully bilingual in Assamese, and most young Rabhas have a better command of Assamese than they have of Rabha.

**Dhimalish languages**

Dhimalish includes the Toto and Dhimal languages. Toto is spoken by a small tribal group at the town of Tōtōpārā in Bakṣā or Māḍārhāt subdivision of Jalpāgūḍī district in the Indian state of West Bengal near the Bhutanese border town of Phuntsholing. In November 1994, there were 176 Toto families with a total number of 992 Toto speakers. Although this language of the Bhutanese duars is officially spoken on the Indian side of the border today, the Royal Government of Bhutan has recognised the precarious situation of this community and commissioned a grammatical investigation of the language, which is currently being prepared for publication. On the basis of British sources, it is known that the range of Toto-speaking settlements was once far larger than it is today.

The Dhimal live in Jhāpā and Moraṇ districts in the eastern Nepalese Terai. There are two distinct Dhimal language communities, an eastern conglomeration of sixteen villages in Jhāpā district to the east of the Kānkhāmī or Māl river, with an estimated 3,000 speakers, and a western tribe of over 25,000 speakers to the west of the river doing so. Tiwa, also known as 'Lalung', is spoken by about 35,000 people settled in Kamrup and Marigaon districts and in the Karbi Anglong, formerly known as the Mikir Hills. Garo is the only Bodo-Koch language not threatened with imminent extinction. About 200,000 of the 250,000 people living in the western half of the Meghalaya, known as the Garo Hills, speak Garo. An additional 50,000 Garo speakers live in the Assamese districts of Goalpara and Kamrup and in Mymensing District of Bangladesh, which all skirt the Garo Hills. Some Garo even live further south in the Bangladeshi hinterland, e.g. about 15,000 in Modhupur.
inhabiting about twenty-four villages in western Jhāpā and fifty-one villages in Morāng district. The current Dhimal population has recently been estimated as high as 35,000 people, though the 1991 census somehow only counted 16,781 Dhimal. The language is rapidly being lost in favour of Nepali, however, because the Dhimal are a 10 per cent minority in their own native areas. The groups in the same region which are sometimes identified as Jhāngad Dhimal are speakers of the Dravidian language Jhagnar.

Konyak languages

The ‘Northern Naga’ or Konyak languages are spoken in Arunachal Pradesh, Nagaland and adjacent areas of Burma. Two clusters can be distinguished, the first comprising the languages Konyak, Wancho, Phom, Khiamngan and Chang, and the second comprising Tangsa and Nocte. Tangsa, Nocte and Wancho are spoken in Arunachal Pradesh, whereas Konyak, Phom and Chang are spoken to the southwest in Nagaland. There are approximately 30,000 Wanchos in approximately forty-one villages grouped into eleven federacies, known as jan, in the southwestern tip of Tirap district between the foothills and the Patkoi range. To the south of the Wancho, in Nagaland, live approximately 70,000 speakers of Konyak. South of the Konyak live about 19,000 speakers of Phom. To the southeast of the Phom, approximately 16,000 Chang occupy the hinterland of Nagaland, stretching back into the high range which divides India from Burma. An unknown number of speakers speak Khiamngan, and the precise whereabouts of this language community is unknown. There were about 20,000 Tangsa in Changlang and Miao subdivisions of Tirap district. The Jogi, Moklum and Lunchang languages are dialects of Tangsa, divergent enough to warrant separate documentation and each spoken by well over 1,000 people. The Noctes live in central Tirap to the northeast of the Wanchos and to the west of the Tangsas. There are approximately 28,000 Nocte.

Karbi

Karbi or Mikir is spoken in the Karbi Anglong or ‘Mikir Hills’ of Assam as well as in the neighbouring districts of Kamrup, Nowgong and Sibsagar. The language is not a Brahmaputran language, but a taxon unto itself within the Tibeto-Burman language family. There are over 150,000 Mikir, the vast majority of whom reside in the Karbi Anglong. Half of the Karbi are bilingual in Assamese, and amongst the younger generation the ancestral language is being abandoned at an alarming rate in favour of Assamese.

Endangered Tibeto-Burman and Daic languages of the Indo-Burman borders

Ao languages

The Ao languages are spoken in central Nagaland. These are Chungli Ao, Mongsen Ao, Sangtam, Yimchungru, Lotha, Yacham and Tengsa. Lotha is the most robust with about 35,000 speakers. All the other Ao languages together have about 65,275 speakers. Over one third of the population of Nagaland are not indigenous Tibeto-Burmans, but Indo-Aryan settlers. Due to the many languages spoken in Nagaland, the increased mobility of all population groups and the use of Assamese and Nagamese, a low-status Assamese-based creole, as lingua franca, all the Ao languages are threatened with extinction.

Angami-Pochuri languages

There are two language clusters, one consisting of Angami, Chokri, Kheza and Mao, and the other of Pochuri, Ntenyi, Maluri, Sema and Rengma. There are roughly 30,000 speakers of Angami and an estimated 65,000 speakers of Sema. The other languages are all spoken by far smaller populations. For example, there are about 9,000 speakers of Rengma.

Zeme languages

The linguistic territory of the Zeme languages lies in the southwestern corner of Nagaland and the northwestern portion of Manipur, where the languages Zeme, Liangmai, Nruangmei, Mzieme, Puiron, Khoiraoo and Maram are spoken. There are no good population counts for these language communities. There were twenty-six Zeme-speaking villages in 1901, whereas the 1971 census returned 406 Khoiraoo, 19,968 Maram and 17,360 Rongmai. All Zeme languages are threatened with extinction. The direction of linguistic assimilation is generally towards Meithei, a robust Tibeto-Burman language which is the official language of Manipur, spoken by over one million people.

Tangkhul languages

Tangkhul territory covers the northeastern quadrant of Manipur. The two languages are Tangkhul in the north and Maring in the south. The 1971 census returned 38,167 ethnic Tangkhul in Manipur, and no separate data were available on Maring. Tangkhul is being lost in favour of Meithei and is nearly extinct. It is not known whether Maring is already extinct or still survives in certain households.

Mizo-Kuki-Chin languages

Some languages of this branch are not yet endangered, e.g. Mizo, also known as Luishai, spoken by 300,000 people. Precise numbers for other language communities are unavailable, but it is certain that all these languages are vanishing fast. Thadou, Kom, Chiru, Gangte, Lamgang, Anal and Paite are spoken by dwindling numbers of speakers in Manipur, where these communities are being linguistically assimilated to the Meithi-speaking majority. The small Lakher language community in southern Mizoram is assimilating to the Mizo-speaking minority. The Simte, Zo, Vaiphei, Tiddim Chin, Falam Chin, Haka Chin and various Southern Chin language communities in Burma are being linguistically assimilated by the Burmese-speaking majority. The small Hrangkol, Choret, Bawm, Kom and Hmar language communities in Tripura, southern Assam and the northern tip of Mizoram are all assimilating to the Assamese or Bengali-speaking majority.
Mru is a Tibeto-Burman language in a class by itself. The estimated 40,000 speakers of Mru in the central hills of the Chittagong in southeastern Bangladesh are losing their language in favour of Bengali.

Sak languages

The Kachinic branch consists of the Sak languages and the Jinghpaw dialects. The Sak languages, formerly also known as ‘Luish’ languages, are Sak, Kadu, Andro and Sengmai. Andro and Sengmai went extinct in the course of the twentieth century. The descendants in Manipur now speak Meithi. In 1911, Kadu was still spoken by at least 11,000 people in the portion of the Burmese district of Katha adjacent to Manipur. It is unknown whether there are any hamlets or households in which the language is still spoken. The Chakmas of the northern Chittagong hill tracts have adopted Bengali, but the Chak, Cak or Sak in the southern Chittagong hill tracts still speak their ancestral Tibeto-Burman tongue. The Sak are separated from the Chakma by bands of territory inhabited by speakers of the Mru language and of the Arakanese dialect of Burmese. A mere 1,500 speakers of Sak were counted in 1981 in the area of Alaykhyong, Baichiri, Nakhari and Nakhyongchari near the Burmese border east of Cox’s Bazar.

Daic languages

Ahom is an ancient Daic language introduced into the lower Brahmaputra valley in what today is northeastern India with the incursion of a Daic tribe in 1228. A Daic élite led by prince Sukapha imposed its language and culture upon a Bodo-Koch populace, but their language ultimately went extinct and all that survives are chronicles known as Buranjis. Subsequently other Daic groups migrated into northeastern India, such as the Khampti and Tai Phake or ‘Phakial’, who arrived in the mid-eighteenth century. Today the Khampti predominantly inhabit the southeastern corner of Lakhimpur district in Assam and neighbouring portions of Lohit district in Arunachal Pradesh, and an unknown but dwindling number of ethnic Khampti still speak their ancestral Daic language. The roughly 11,000 speakers of Aiton or ‘Phakial’, Patkoi who arrived in the early eleventh to Jorhat subdivision of Sibsagar district. Most of the Tai Nara have lost their native Daic tongue, whereas the few Tai Nara who continue to speak the language usually identify themselves and their language as Khamyang. The Tai Rong or Tai Long ‘Great Tai’ are a Shan group who settled in northeastern India in 1825 likewise settling in Jorhat. The approximately 2,000 speakers of Aiton or ‘Shám Doányâs’ are also a Northern Shan group who fled to avoid persecution in the nineteenth century and settled in small numbers in Lakhimpur and Sibsagar districts and the Naga Hills.

Endangered languages of Nepal

The 1971 census returned 220,000 speakers of all the Rai languages taken together. After the Nepalese Revolution did away with repressive language policies in 1990, it became popular to identify oneself as a speaker of one’s ancestral language even when one no longer spoke it. In the 1991 census, 80 per cent of the 525,551 Rai people reportedly still spoke their native language, but this outcome is the product of collective wishful thinking. All Rai languages are moribund and will go extinct within one or two generations at the present rate, being lost in favour of Nepali. A comparable situation exists amongst the Limbu. The Kiranti languages consist of the Limbu group, Eastern Kiranti, Central Kiranti and Western Kiranti. Sometimes the Limbu and Eastern Kiranti languages are grouped together under the heading of Greater Eastern Kiranti languages.

The Limbu group

There are an estimated 300,000 ethnic Limbu in eastern Nepal and a portion of western Sikkim. It is sometimes claimed that language retention is as high as 80 per cent, but these figures belie the dire situation of these languages. The most conservative Limbu language, Phedâppe, will probably go extinct when today’s generation of young adults takes the language to the grave with them because virtually nobody in the Phedâppe language community is currently raising their children in Limbu. The linguistic situation is comparable in the even smaller Chathare language community. The situation is slightly better in the larger Pâinchhare language community to the west of the Tamor. Yet even the prospects for Pâinchhare as well as Tamarkhole, the Limbu dialect spoken in northeastern Limbuwân, look bleak. Under the currently prevailing sociolinguistic conditions Limbu is likely to be completely extinct by the end of this century unless measures are taken to revitalise the language through the primary school system.

Eastern Kiranti languages

Eastern Kiranti consists of the Upper Arun and Greater Yakkha languages. The languages of the Greater Yakkha cluster are Yakkha, Chiling and the Athpahariya dialects. Yakkha is on the verge of extinction. There are reportedly only a few isolated households where the language is still spoken on a daily basis, though there is a slightly larger number of elderly Yakkha throughout the former Yakkha territory who can remember the language, but have no fellow speakers with whom to speak it. Chiling is a Rai language spoken by about 3,000 people in the hamlets and villages of Añkhisallâ in Dhankutâ district. The language has managed to survive surprisingly well amongst the approximately 600 households where it is spoken. Language retention amongst the Chiling younger generation is still relatively good, but under the present sociolinguistic conditions it is highly unlikely that the next generation of speakers will be raised in the language. The Athpahariya dialects are spoken by the indigenous people of Dhankutâ district, who are now vastly outnumbered by settlers from outside. There is significant dialectal diversity within the Athpahariya dialects area. For example, the Belhare variety is somewhat distinct. Comprehensive grammatical and lexical documentation of the Athpahariya dialects is a matter of great
urgency. There are probably only several hundred elderly speakers, and these lan-
guages are all now on the verge of extinction.

The Upper Arun or Yakkhaba languages are Yamphu, Lohorung and Mewahang. The Yamphu is spoken by less than 3,000 people in the upper Arun valley in the north of Sankhuwā Bhābā district. Lohorung is spoken by an estimated 4,000 people in a language community in the central portion of Sankhuwā Bhābā district on the left bank of the Arun. Mewahang is spoken by a comparable number of speakers north of the Sankhuwā river and to the east of the Arun. The southern portion of the Mewahang area is flooded with Indo-Aryan colonists as well as Newar, Ghale and other Tibeto-Burman migrants from more westerly parts of Nepal. These language communities are all bilingual in Nepali. In terms of language they have fared surprisingly well until today. Yet these communities are now being subjected to unprecedented upheaval due to the economically motivated emigration of their members to urban centres elsewhere and the likewise economically motivated influx of monied outsiders into these areas. Not only are indigenous languages of the Himalayas endangered by the construction of roads into their areas, the socio-economic detrimental effects of roads on indigenous populations are often observed, studied and reported. In Nepal roads have generally benefitted outsiders moving in and had deleterious economic effects on local people, but this is a message which development banks, aid organisa-
tions and governments do not want to hear.

Central Kiranti

The Central Kiranti languages comprise the Khambu group and the Southern Kiranti languages. The Khambu group encompasses Kulung, Sampang, Nachiring and probably Sâm. Kulung is spoken by an estimated 15,000 people, mainly in Solukhumbu district but also in neighbouring portions of Sankhuwā Bhābā district. Nachiring is spoken downstream from the Kulung area, just above the confluence of the Hoṅgu and the Dūdhkōṣō and in the swathe of territory which lies between Hulu and the Rāva river in Khotāṅ district. There are only an estimated several hundred speakers of the language, all quite elderly and often isolated from other speakers. Sampang is spoken in the Khārāmchā, Pheḍā and Pituṛkā areas of Khotāṅ district and in adja-
cent parts of Bhojpur district to the east. Although there may be over a thousand speakers, increasingly fewer members of the younger generation are learning the lan-
guage. The Sâm inhabit the territory which straddles both Sankhuwā Bhābā and Bhojpur districts along the Ikṛhvā river, a western tributary of the Arun. It is uncertain whether there are any remaining speakers of the language, but patient sleuthing in the area could uncover a remaining Sâm-speaking household.

The Southern Kiranti languages are Bantawa, Chintang, Dungmali, Chamling and Puma. They are spoken in the lower hills region between the Dūdhkōṣō and the Arun. The Sunkōṣō which runs through this area cuts through Chamling territory, but in the east, where the river has already descended onto the plains, it more or less coincides with the southern border of Bantawa territory. Two of the Southern Kiranti lan-
guages, Bantawa and Chamling, are respectively the largest and second largest Rai language in terms of numbers of speakers. Yet hardly any young people speak these languages. Bantawa is the language native to Bhojpur district. Dungmali is spoken in the northeastern quarter of Bhojpur district, north of the Pikkhā river, covering the territory on the right bank of the Arun across the river from Yakkha territory.

Western Kiranti

Western Kiranti consists of the Thulung, Tilung, the Chaurasiya group, the Upper Dūdhkōṣō languages and the Northwestern Kiranti languages. Thulung is spoken mainly in the southern part of Solukhumbu district and in the territory surrounding the confluence of the Solu river and the Dūdhkōṣō. Thulung is so distinct within Kir-
anti that it is viewed as a group on its own, termed Midwestern Kiranti. The number of Thulung has been estimated at 8,000, but the language is being lost. Tilung is a Kiranti language about which very little is known except the name and the approxi-
mate location. The language is spoken only by an indigenous minority in the triangle of land between the lower course of the Dūdhkōṣō and the part of the Sunkōṣō below the confluence in the southwestern portion of Khotāṅ district. There are few remain-
ing speakers.

The Chaurasiya group comprises the languages Ombule or ‘Wambule’ and Jero. Ombule is spoken around the confluence of the Dūdhkōṣō and Sunkōṣō. The Jero-
speaking area is contiguous with Ombule territory and lies to the northwest of the Ombule area on both sides of the Sunkōṣō. There are approximately 15,000 Chaur-
asiya people, speaking either Jero or Wambule, and language retention is rapidly waning in the younger generation.

The Upper Dūdhkōṣō languages are Dumi, Kohi and Khaling. There are less than eight speakers of Dumi east of the Lidim river, all of whom are very elderly. There are unsubstantiated reports of middle-aged speakers around Aiselukharka on the west bank of the Lidim. The Dumi homeland is the area between the Rāva and the Tāp rivers. Kohi is an undescribed Rai language related to Dumi. The language is still spoken in and around the village of Sundel along the upper headwaters of the Rāva in Khotāṅ district. Language retention amongst the young is still good, but the language community is very small. Khaling is spoken by about 15,000 people in Solukhumbu district in the mountains on either side of the Dūdhkōṣō from Bupṣā above Jumbhī as far downstream as Kilimpā, just above the confluence of the Hoṅgu river and the Dūdhkōṣō.

The Northwestern Kiranti languages are Hayu, Bahing, Sunwar and perhaps Surel. If there are any elderly speakers of Hayu remaining, they would most likely be found in the villages of Muṅāhāi, Bārdāṇḍā, Mānedlī, Adhamār or in some neighbouring hamlet. Hayu was once spoken in a corridor of land, along the Mahābhārat Lek range alongside the Sunkōṣō above its confluence with the Līkhu river, primarily in Rāma-
chāp and in neighbouring portions of Sindhulī and Kābhrepālāheo districts. Bahing is also on the verge of extinction. The language has been lost or language retention is
poor in most Bahing villages. There are a few exceptional villages with exceptional households, however, within the Bahing homeland area in Okhaldhunga district and neighbouring parts of Solukhumbu. Sunwar is the most northwesterly of the Kiranti languages, and it is now spoken only by a small and dwindling minority out of the approximately 30,000 ethnic Sunwar. The Sunwar homeland is the river valleys of the Likhnu and Khimti, tributaries of the Sunkosi and Tamakoshi respectively. The Sunwar live in the village of Surf near Hāleivara in Dolakha district. Their language is spoken by at least several hundred people, and some claim that it represents a more archaic stage of the Sunwar language.

**Newaric**

The Newaric languages are Newar, Barām and Thangmi. Newar is the Tibeto-Burman language of the urbanised civilisation of the Kathmandu Valley. The language has an epigraphic tradition dating back to 1171 AD. Land deeds survive in Newar from as early as 1114 AD, and the Newar literary tradition dates back to 1374. There are over a million Newar. None the less Newar is a language endangered with imminent extinction. All Newars are bilingual in Newar and Nepali. Nepali is a language originally not native to the Nepali capital. Today the native Newar are vastly outnumbered in their native homeland of the Kathmandu Valley.

At a Tibeto-Burman workshop held at the University of California at Santa Barbara on 28 July 2001, the Newar scholar Dayā Ratna Šākya went as far as to proclaim that 'the more educated the Newar, the less likely he is able to speak Newar'. This is a damning observation to have to make about the language that has been the daily means of communication for a society that yielded one of the most advanced pre-modern societies and has produced sublime art and a refined culture and acted as the midwife for the birth of numerous schools of philosophy. The drastic sociolinguistic changes which have overwhelmed the culturally and technologically advanced Newar language community since the conquest of the Kathmandu Valley by Pṛthvī Nārāyan Sāh in 1768 may serve as a metaphor for the convulsive changes which are now overwhelming language communities all over the world as they increasingly come under siege by expansive languages such as English.

There is a large Newar language community, but few families are raising their children in Newar. It has even been claimed that none do so. Though the language community is still large in absolute terms, the language may already have reached the point of no return. The prospects may be slightly better for other Newar dialects, which are at any rate not mutually intelligible with the Newar language of Kathmandu and Pātān. The situation is in fact not much better for the Newar dialect spoken in Bhaktapur, but the highly divergent Pahārā and Citiṅgā dialects and the Dolakha Newar language could conceivably hold out for another generation. The Pahārā and Citiṅgā dialects are spoken by rural groups at localities within the Kathmandu Valley and surrounding hill tracts, whereas the Dolakha Newar language is spoken far away in Dolakha district.

Barām is still spoken in just one village in Gorkha district in central Nepal, i.e. Dānggā in the Pipāl Dānghā in the Tākūko valley. Ethnic Barām can be found throughout Gorkha district as well as in Dhādīn and Nuvākot districts. However, in these areas only a few very elderly and isolated individuals can be found with some fragmentary recollection of the language. There are only a few hundred speakers of Barām, but the fluent speakers are all middle-aged to elderly and together number far less than a hundred. Thangmi is spoken by approximately 30,000 people, mainly in the northern portion of Dolakha district, but also in eastern Sindulpālkoş. Language retention is poor amongst the younger generation.

**Shingsaba**

Shingsaba or Lhomī are a cis-Himalayan Bodish group with a distinct language. Not much is known about the language, but Shingsaba may not even be a Bodish language, but one heavily influenced by Tibetan. The language may have some affinity with the Kiranti or Tamangic languages. Just over 4,000 speakers were reported in the 1970s. The Shingsaba live in villages on the steep slopes of the upper Arup upstream from the Hēdāmā area in Sākhuwać Sābā district as far as the Tibetan border, e.g. in the villages of Cāmānjīn and Kīmbhāγhā. The Shingsaba area is surrounded by the towering Lumbā-Sumbā Himāl, Umbhak Himāl and Kumbhakarna Himāl.

**Magaric**

Magaric includes the Magar dialects spoken by the southern Magar septs and Kham or Northern Magar. According to the 1991 census data on language retention, only 430,264 out of 1,339,308 ethnic Magar or one third of the Magar population in Nepal still speak the Magar language, but this return is higher than the real number. Actual language retention is sadly just a fraction of this number. The Magar have been a highly mobile group since the dawn of the Gorkha conquest in the eighteenth century, and most Magar communities have abandoned their language in favour of Nepali. The language is primarily still spoken in small communities found between the Bheri and Marsyangdi, especially in the districts Pālpā, Sāyānī, Tānakhā and Gorkhā. The original home of the Magar was known as Bāhra Magarāṇ 'the twelve Magar regions', which comprised all the mid-hill regions of Lumbī, Rāptī and Bheri zones. The Magar still live in these areas as well as in adjacent parts of Gandakī and Dhawalāgiri zones. There is great dialectal variation within Magar, and because of major differences in grammar and lexicon the various dialects merit separate studies. Northern Magar or Kham is also a distinct language spoken by at least 30,000 people in the upper valleys of Rukum and Rolpā districts in west-central Nepal and in adjacent portions of Bāγluḍī district, separated from the Magar area proper by several days' walk. Most Magar dialects are on the verge of extinction, with few children being raised in Magar anywhere. The prospects for Kham are slightly better in the short term.

**Chepangic**

Chepangic consists of Chepang and Bhujei. Chepang is spoken by only 25,097 out of 36,656 ethnic Chepang or two thirds of the Chepang, who live in Makāvāṇpur, Cit̄van and Dhādīn districts, south of the Trisuli river, north of the Rāptī river and west of the highway connecting Hetaūḍī to Kathmandu. Chepang proper is spoken to the east of the Nārāyāṅi river, whilst Bhujei is spoken by at least 2,000 people in Tānakhā district to the west of the Nārāyāṅi. The Chepang have until recently lived as semi-nomadic hunter-foragers, but their habitat has been largely denuded and rendered accessible by roads and settlers from elsewhere in Nepal. The work of Christian missionaries has
pitted the converted against the traditionalist Chepang. Therefore, the Chepang are now entering modern Nepalese society as a fragmented and socio-economically depressed group, compelled to assimilate both linguistically and culturally in order to survive at all.

**Raji and Raute**

The Raji and Raute are two groups who have until recently lived as semi-nomadic hunter-gatherers in the western Nepalese Terai and the adjoining portion of Pithaurāgadh district in Uttarkhand. The Raji and Raute groups have been compelled to abandon their traditional lifestyle and adopt a sedentary existence by Nepalese and Indian government resettlement programmes. This has left most Raji and Raute destitute and prey to alcoholism and other social ills. Just 472 Raji died in the Indian district of Dariagālhā, the present generation of speakers expires. Therefore, the converted against the traditionalist Chepang. Therefore, the Chepang are now entering modern Nepalese society as a fragmented and socio-economically depressed group, compelled to assimilate both linguistically and culturally in order to survive at all.

The Raji and Raute are two groups who have until recently lived as semi-nomadic hunter-gatherers in the western Nepalese Terai and the adjoining portion of Pithaurāgadh district in Uttarkhand. The Raji and Raute groups have been compelled to abandon their traditional lifestyle and adopt a sedentary existence by Nepalese and Indian government resettlement programmes. This has left most Raji and Raute destitute and prey to alcoholism and other social ills. Just 472 Raji were counted in 1988 in the Indian district of Pithaurāgadh, where they had been resettled in four villages in Dhārcūlā tehsil, four villages in Didihāt tehsil and one village in Campāvat tehsil. The 1991 census of Nepal returned 3,274 Raji and 2,878 Raute by ethnicity, and 2,959 Raji by mother tongue. The Raji are primarily settled in Dariagālhā, the present generation of speakers expires. Therefore, the converted against the traditionalist Chepang. Therefore, the Chepang are now entering modern Nepalese society as a fragmented and socio-economically depressed group, compelled to assimilate both linguistically and culturally in order to survive at all.

**Dura**

The Dura language is a Tibeto-Burman language which was spoken until the 1970s in the heartland of Lamjung between the Pāḍi and Midim rivers. The last speakers passed away in the 1980s. The surviving Dura data have been collated in Leiden. The precise position which Dura occupied within the Tibeto-Burman language family has yet to be determined.

**Gurung**

Gurung is a Tamangic language. The Tamangic group includes Gurung, Tamang, Thakali, 'Narpa, 'Nyishangba, Gyasumdo, Chantyal, Kaire and perhaps Ghale. According to the 1991 census data on language retention, 227,918 out of 449,189 ethnic Gurung or about one half of the Gurung population still speaks the Gurung language. Gurungs live in the districts Gorkhā, Kāśē, Lamjung, Parbat, Sāyan, Tānāhā and Dhādin. Gurung comprises three dialects with a low degree of mutual intelligibility between them: (1) a relatively homogeneous western Gurung dialect in Kāśē and Parbat; (2) a heterogeneous eastern dialect group in Lamjung, Gorkhā and Tānāhā; and (3) a southern dialect in Sāyan. All Gurung language communities are abandoning the language in favour of Nepali. Probably no young children are being raised in the language, so that all dialects of the language are likely to go extinct after the present generation of speakers expires.

**Manangba**

The Manangba dialects include 'Nyishangba, Gyasumdo and 'Narpa, spoken respectively in the upper Manang valley, the lower Manang valley, and in the 'Nar and Phu valleys, east of the Annapūrṇā Himal massif. The 1971 population estimate for the 'Nar-Phu dialect area was approximately 500, whilst the 1971 census put the number of Manangba in Manang proper at approximately 2,600. The latter figure revealed that at the time the Manangbas already effectively constituted merely one third of the population of their native homeland in the Manang valley. A sociolinguistic detail relevant to any field linguist is that the speakers of Manangba dialects generally resent the qualifications Manangba or Manāi, both of which have acquired a derogatory connotation. Instead, these people prefer to be known as Gurungs.

**Tamang**

According to the 1991 census data on language retention, 904,456 or nearly 90 per cent of the 1,018,252 ethnic Tamang reported Tamang as their first language. Though already in a precarious position, Tamang is not yet as endangered as the other Tamangic languages. Tamang language communities are found dispersed throughout central and eastern hill regions of Nepal, especially in the districts Kābhpālahāck, Makvānnpur, Sāndhupālāck, Nuwākot, Dhādin, Sāhduhi, Rāmechāp, Bāgmāti, Dolākhā and Rāsvā. A majority of 83 per cent of the population in the sparsely populated district of Rāsvā in Bāgmāti zone is Tamang-speaking. There is a clear distinction between the western and eastern dialects of Tamang, whereby the Tīsāffī river demarcates the linguistic boundary between the two varieties, with transitional dialects found in western Makvānnpur. 'Murmi’ is an obsolete term for Tamang. The Humīl Tamāni ‘Tamangs of Humīl’ and Mugu Tamāni ‘the Tamangs of Mugu’ are not linguistically Tamangs, but Limirong Tibetans and Mugu Tibetans respectively.
Kaike and Chantyal

Kaike is another Tamangic language spoken by approximately 2,000 people in several villages in Dolpo district. The language is also known as ‘Tārālī Khānī’ or ‘Tārālī Magar’. This name is taken from the toponym Tārālī ‘star fort’, the main town in Tichurong, where these people live. Chantyal is spoken in the hills south of the Thakalí area between the Myāğdī and Bheri rivers on the steep western and southern slopes of the Dhaulāgiri massif. The Chantyal until recently worked the copper mines of the area. Approximately only 2,000 of the 10,000 ethnic Chantyal still speak the language. The ethnic Chantyal are divided into two groups, one in the northeast, in Myāğdī district, and the other in the southwest, in Bāgliu district, the two areas being separated by a ridge. The Bāgliu Chantyal had ceased to speak Chantyal by the nineteenth century. The Myāğdī Chantyal still speak the language in certain villages, e.g. Māngale Khānī, Dvārī, Ghyās Kharka, Caurā Khānī, Gūrjū Khānī, Kuḫène Khānī, Thārā Khānī, Pātte Kharka, Mālāmpār and Mālākān, as far as the Kāhūghā Khālā.

Ghale

Ghale is a Tibeto-Burman language which may, in fact, not be Tamangic, but may phylogenetically constitute a group on its own within the Tibeto-Burman language family. The number of Ghale speakers was estimated at 12,000 in 1975. The language is spoken in the northern portion of Gorkhā district, where there are thirty-three Ghale villages and hamlets, and in an adjacent portion of Dhañīdī district. The main Ghale speech community lies in the area surrounding and north of the town of Bārpāk, which has about 650 houses. Traditionally, the Ghale have been ethnically classed with the Gurung, with whom they may intermarry. The designation ‘Ghale Gurung’ is even heard, though others deny that they are Gurung. The inaccessibility of the area has protected the language thus far. Yet even in this remote northern part of Gorkhā district, language death is inevitable, given the present pace of linguistic assimilation to Nepali in Nepal.

Endangered Tibeto-Burman languages of the western Indian and Pakistan Himalayas

West Himalayish

The ten West Himalayish languages are spoken in scattered enclaves in the western Himalayan ranges, between Jammu and Kashmir in the west-northwest and the modern state of Nepal in the east-southeast. Rangkas was recorded at the beginning of the twentieth century, but is now extinct. Zhangzhung went extinct even earlier, and used to be spoken to the north of the Himalayas across a large portion of western Tibet until it was wiped out by Tibetan towards the end of the first millennium AD. All surviving West Himalayish languages are severely endangered.

The three languages Manchad, Tinan and Bunang are spoken in Lahul district in what today is the Indian state of Himachal Pradesh. Manchad is spoken along the Chandra or Upper Chenab river by approximately 15,000 people who have adopted the Hindu religion, and whose language has adopted many Indic loanwords. The term ‘Manchad’ means ‘lower valley’ in the local Tibetan dialect. The language has also been called ‘Paṭān’ or ‘Paṭṭān’ after the Paṭān or Paṭṭān valley, where it is spoken from Tandi as far upstream as Thirot. Tinan is spoken on the Chenab immediately downstream from the Manchad area, from Tandi as far downstream as Sissu Nullah, particularly in the area known as Gondhla. The 1981 census counted 1,833 speakers of Tinan. Bunang is spoken in the Gahar or Gahr valley which covers both banks of the Bhāgā river from Tandi northeast to Kyelang. The Bhāgā is a tributary emptying into the Chenab from the north. The 1981 census enumerated 3,581 speakers of Bunang.

Kanashi is a special language within this branch of the family, spoken in just the one village of Mālāṭa near Kulu in Kulu district of Himachal Pradesh. Kinnauri is spoken in Kinnaur district of Himachal Pradesh. It is unknown what percentage of the 59,154 people enumerated in the 1981 census for Kinnaur district actually still spoke the language. Rangpo or Rongpo is spoken along the northeastern fringe of Garhwal, confined to the area of the Nīṭ and Māṭā valleys in Jōśmat subdivision of Cāmāll district, north of Bādrināth along the upper course of the Alakāndā river and around the lower course of the Dhaulā-Gāṅgā river above its confluence with the Alakāndā at Jōśmat. There are an estimated 12,000 remaining speakers of Rangpo. Darma and Byangsi are spoken further west in the Indian-Nepalese borderlands, straddling the Indian districts of Amlīdī and Pithaurāgā in the area that used to be known as Kamaun as well as in the Nepali district of Dārcūḷ. Darma is spoken in the uppermost portion of the Dārmā valley, drained by the river Dhaulā and bounded in the north by Tibet. At the beginning of the twentieth century, 1,761 speakers of the language were counted. No more recent statistic is available. Immediately to the east of the Dārmā valley lies the Mahākālī river valley, which is the home to the Byangsi. The 1991 census counted 1,314 Byangsi in Nepal. A form of Byangsi was recorded by Sten Konow under the name ‘Chaudāngsi’.

Central Bodish languages

Europeans call German and English ‘languages’, rather than treating them respectively as a hinterland dialect and an insular dialect of Dutch. However, Westerners tend to treat languages in other parts of the world as ‘dialects’ which are just as distinct from each other phonetically, phonologically, morphologically and lexically as German and English are from Dutch. The same applies to what are generally referred to in the West as ‘Tibetan dialects’. The Standard or Central dialect of Tibetan, spoken in Lhasa, is not an endangered language, even though the language is undergoing heavy lexical and even grammatical influence from Mandarin, the language of the occupying forces. Kham and ‘Amdo Tibetan also still represent lively language communities. However, many other ‘Tibetan dialects’ are endangered. Linguistically, it is more correct to refer to these languages as Central Bodish languages, and not as ‘Tibetan dialects’. These include the many diverse languages spoken in the western extremity of Tibet, parts of which now lie in the modern states of Pakistan and India, as well as the languages spoken in the sBas-yul ‘hidden lands’, as the high alpine valleys on the southern flank of the Himalayas have been referred to from the Tibetan perspective.

The Central Bodish languages of western Tibet are in many respects the most conservative of the Tibetan languages and also amongst the most endangered. They are spoken in the parts of Tibet which are now located in the modern states of Pakistan and India, in the areas of sBal-ti ‘Bālti’, Bu-rig ‘Burik’ or ‘Pūrik’, La-dwags ‘Lada’ of ‘Ladakh’, sBi-ti ‘Biti’ or ‘Śpiṭi’, and Zangs-dkar ‘Zāṅgkar’. In the western Indian
Himalayas, the languages of the ‘hidden lands’ include Jâd, spoken mainly in Bagorâ village, just 17km south of Uttarkâši on the banks of the Bâghârâth, where the Jâd were resettled after the Indo-Chinese conflict of 1962. Some settlements are also found in Purolâ, Râjâghâth, and Bhâjâvâth sub-divisions. Their original homes lay on the Indo-Tibetan border.

In Nepal, several Central Bodish languages are spoken in enclaves on the southern slopes of the Himalayas which show characteristics divergent from Central Tibetan proper. These include the dialects spoken by the Limiurong Tibetans in the extreme northwest of Karnâth zone in the district of Humlâ, the Tibetans of Mugu and the Karmarong Tibetans in northwestern Nepal, the dialect of Dol-po ‘D’olpo’, the dialect of Mus-tang known as ‘Loke, the dialect of the Nupri or Lârkyâ Bhote below Manûshl Huml in Gorkha district, the dialect of the Tsum in a few villages along a tributary of the Budû Ghândâk known as the Shar, the community of Khaccad Bhote ‘mule Tibetans’ north of Dhâibû and northeast of Nuvûkot, the ‘Langthang Tibetans south of the ‘Langthang Huml and north of Jugal Huml and Gosalâkund, the well known Sherpa in the mountains surrounding Mt Everest and in Solu Khumbu, and a small population living at Ha-lung, known in Nepali as Olâncun Golu, and at Tûpke Golu and Thudam in the northeastern extremity of Nepal around the headwaters of the Tamor.

In Bhutan, three endangered Central Bodish language communities account for nearly 15,000 people. The Brokpas of Sûphû Geo in ‘Wangi Phodr’a district in the north in the Black Mountains speak a dialect called Lakhâ ‘language of the mountain passes’ or Tshangkha. There are an estimated 8,000 speakers. Brokkat is a Central Bodish language spoken by the Brokpa community of 300 speakers at Dûr in Bum­thang district in central Bhutan. A Central Bodish language is spoken by approxi­mately 5,000 people at Mera and Sakteng in eastern Bhutan. A number of Tibetan enclaves are also spoken in Arunachal Pradesh, south of the McMahon line on the Indian side of the Indo-Tibetan border.

Other Bodish languages
Jîrel is a poorly documented Bodish language spoken by about 3,000 people in the Jîrl and Sîkiri valleys of Dolakha district in northern central Nepal. The name Jîrel is the Nepali adjectival form of the place name jirî. Kâgate is spoken in the mountains between the Lîkhon and Khîmî rivers in the northeastern part of Râmchêp district by the Kâgate Bhote ‘paper Bhutiya’ because their ancestors used to manufacture paper. The Kâgate call themselves ‘Syu:bâ’, which likewise signifies ‘paper maker’, and pass themselves off as ‘Tamang’ to outsiders. The number of speakers was estimated at about one thousand in 1974. There is another group of ‘Sherpas’, who are not recog­nised as Sherpas by the Sherpa proper, mentioned above. Whilst the Sherpas around Mt Everest and in Solu Khumbu speak a Central Bodish language, the Sherpa of Yol­mo or ‘Olmo’, an area known in Nepali as Helambû, north of Sînhupâlek, speak a distinct Bodish language.

Endangered Indo-European languages of South Asia

Indo-European languages are spoken throughout the north of the Indian subcontinent and on Sri Lanka. All of these are Indo-Iranian languages belonging to Iranian, Nuristani and Indo-Aryan branches. Nuristani sometimes still goes by the name ‘Kafiri’, and Indo-Aryan is sometimes still called ‘Indic’.

Iranian languages

Older stages of Iranian, such as Avestan, Old and Middle Persian, Pehlevi, Parthian, Sogdian, Chorasmian, Bactrian, Sarmatian and Khotanese, have gone extinct or have effectively been superseded by later stages of Iranian. The modern languages Persian or Farsi, Darî, Tajik, Kurdish, Baluchi or Balâcê, and Pashto or Pakhto are flourishing. Yet a number of Iranian languages are spoken only by small and dwindling language communities. Ossetian is spoken in the north-central Caucasus. Tâṭi is spoken in parts of Azerbaijan, and Tâši, Tâilesht, Semnânî, Gilâkî and Mâzanderâni are spoken in the southwestern Caspian littoral. Gurâni is spoken in several areas in the Zagros east of the Tîrî, Zâzâ or Dîmi is spoken in eastern Turkey and western Iran. There is considerable dialectal heterogeneity in southwestern, southeastern and central Iran. Other endangered Iranian languages of eastern Afghanistan and neigh­bouring parts of Pakistan include Parâcî, spoken in three valleys along the southern flank of the Hindu Kush, and Örmu, spoken in the area around Barakî-Barak in Afghanistan and at Kânlgrâm in Pakistan. The archaic and highly endangered Pâmîr languages spoken by communities along the Āb-i Panja river in southern Tajikistan, in Badakhshan province of northeastern Afghanistan and neigbouring portions of Chinese Turkestan, include Sughnî, Ro, Bârtangî, Rosîrî, Sarîqî, Yâ », Pekh, Zâbîkî, Sânglî and Iškâsî. Closely related to Paštô are Yidgha, spoken in the Lûtukh valley of Pakistan, and Munîj, spoken in the Munjân valley of northeastern Afghanistan. Yânhnî is still spoken by a small community in an alpine valley around the headwaters of the Yânhnî in Tajikistan. There are no reliable up-to-date statistics for the precise numbers of speakers of these endangered language communities.

Nuristani languages

All Nuristani languages were already faced with imminent extinction before Afghan­istan was turned into a war zone by the Soviet Union under Brezhnev and later by the Taliban and warring Islamists from countries like Saudi Arabia and Pakistan. The Nuristani languages are spoken by tribesmen whose ancient Indo-Aryan ancestors took refuge in the inaccessible mountain valleys of the Hindu Kush in Nuristan. These tribes have no literary tradition of their own and were collectively called Kafirî (‘infi­del’s) until they were converted to Islam after Nuristan was conquered by the Afghans in 1896. The Nuristani languages from north to south are Kati, Prasun, Waigâli, Askun, Gambiri and Zemiâki. Kati, formerly also known as Bashgali, is perhaps still spoken by about 20,000 speakers. All the other Nuristani language communities are much smaller than Kati. Prasun, the most aberrant of the Nuristani languages, is spoken in six villages in the high alpine valley along the headwaters of the Pe, wedged in between the Kati-speaking areas in the Ktiwî valley and the upper Bashgal valley. Waigali is spoken in the Waigal valley, a northern tributary of the Pe, Gambiri or Tregâm ‘three villages dialect’ is spoken not only at Gambir, Kajîr and in the Tregâm valley southwest of lower Waigal in the direction of the Kunar river. The Askun­speaking area lies between the Pe and the Alingar and in valleys along the upper drainage of these two rivers and their minor tributaries. Zemiaki, first identified as a
sixth quite distinct Nuristani language by Edelman and Grünberg-Cvetinović in 1999, is spoken in a small enclave south of the Pec river, south of the Waigal area but immediately surrounded on all sides by Dardic language communities. The Nuristani languages are not only highly important from the point of view of understanding the population prehistory of South and Central Asia, they exhibit numerous peculiar typological features of great interest to cognitive linguistics.

Dardic languages

The most endangered Indo-Aryan languages are the heterogeneous and archaic Dardic languages, spoken in small alpine communities. The five clusters of Dardic languages are the Šinā cluster, the Kohistānī cluster, the Kunar group, the Ciptāl group and Pahāqi. Šinā and Kashmiri are not themselves endangered, but other languages of the Šinā group are threatened with extinction. These are the archaic Phalūra and Sāwī dialects, related to Šinā, and the endangered Dumākī language is of great historical importance because it is believed to be related to the language of the gypsies. Dumākī is spoken by less than 600 elderly Doma in Hunza, who traditionally belong to the lowly minstrel and blacksmith castes in what is now northern Pakistan. The Kohistānī languages are Baškārī, Torwālī, Maiyā, Tirāhī, and the language of Woṭapūr and Kaṭārqaḷā. Baškārī or Gāwīr is spoken around the headwaters of the Swāt and in the Panjkora valley. Torwālī is spoken in the upper Swāt valley. Maiyā is spoken between Šinā and Passho-speaking territory. Tirāhī is spoken in a few villages southeast of Jalalabad in eastern Afghanistan. The language of Woṭapūr and Kaṭārqaḷā is spoken in a few villages on the Swāt in eastern Afghanistan. The Ciptāl languages are Khōwār and Kalaṣā. Khōwār, the language of the Khō tribe, is the main language of the great Ciptāl valley. Kalaṣā is spoken by members of the Kalaṣ tribe in the western side valleys of southern Ciptāl. The nearly extinct languages of the Kunar group are spoken by small communities found around the confluence of Ciptāl and the Bashgil, i.e. Damūfī, Gāwār-Bāfī, Nīṅgālāṁī and Sumāštī. Gāwār-Bāfī or Nīrāfī is spoken in a few villages on the Kunar river. A divergent number of speakers at Nīngālāṁ on the Pec. Another divergent but related language is or used to be spoken at Sumāštī. Damūfī is likewise spoken in just one village. The Pahāqi language is spoken in lower Kunar and in Laghmān and was once spoken over a larger area than it is today.

Western Pahāqi and Central Pahāqi

The three branches of Indo-Aryan known as Western Pahāqi, literally 'mountaine', Central Pahāqi and Eastern Pahāqi do not together form a linguistic taxon, as the nomenclature misleadingly suggests, but merely share the feature of designating groups of alpine language communities. Western Pahāqi languages are spoken from the western portion of Dehrā Dūn district in Uttar Pradesh, through Himachal Pradesh all the way west into Jammu and Kashmir. The 1961 census of India distinguished over sixty highly divergent and poorly documented Western Pahāqi languages known by a welter of local dialect names, including Bangārī, Jaunsārī, Sirmaudi, Baghāfī, Mahāsūl (formerly known as Kūŋjāhtī), Handštī, Kūlū, Manḍelī in the area formerly known as Moande Rājya. Carnālī in the area once known as Cambā-Rājya. Kāngāfī, Bhamautī (or Gādfī), Curāhī, Pāhūvālī, Bhudravālī, Bhābēśī, Khaśāfī and Pāḍrī. The Central Pahāqi languages are the Garhwali and Kumaoni dialects (Gadhāḷī and Kumāṇī), spoken in Garhwal and Kumaon, together forming an area known today as Uttarākhand. All the Western and Central Pahāqi languages are endangered because these areas are increasingly being linguistically assimilated by larger language communities, e.g. Urdu, Panjābī, HIndī. Eastern Pahāqi is represented by the successful and growing Nepali language. The success and spread of Nepali not only has conferred upon the language the dubious honour of being a 'killer language' throughout Nepal, Sikkim and parts of Bhutan, but ironically also of threatening the archaic and divergent western dialects of Nepali itself.

Indo-Aryan languages with possible alphylian substrate

The Tharu in the Terai speak Indo-Aryan dialects collectively known as Tharuwānī, which is not a language in itself but a cover term for various Terai dialects of Bhojpuri, Maithili and especially Awadhī as spoken by ethnic Tharu. The original pre-Indo-Aryan languages spoken by the Tharu are extinct, but survive in the form of substrate words used within households, so that doublets exist for certain words. For example, in Citvan Thāru alongside Indo-Aryan yāndhī, 'eye', there exists a form tēd, 'eye', reminiscent of the Manchad form tīrā, 'eye'. These original Tharu substrate words are being lost because not every household preserves them. The differences between the Tharuwani dialects and the local Indo-Aryan languages spoken by the high castes have never been properly or systematically studied and documented. Varieties of Tharuwani have been investigated by Christian missionaries, but they have kept their linguistic findings to themselves and used their knowledge mainly for the production of hymnals and Christian literature. As the Tharu are being continuously assimilated into mainstream culture, the vestiges of their ancestral language and the peculiar features of Tharuwani are being lost through increasing linguistic assimilation to the mainstream Awadhī, Maithili, Bhojpuri and Nepali language communities.

Three other Indo-Aryan languages of Nepal are in the throes of death. Most speakers of the Danuwar, Darai and Majhi or Bote language communities have already assimilated linguistically and culturally to modern Nepali mainstream culture. The main Darai settlements are in Citvan, Tanahū, Gorkhā, Navalparāsī and Pālā districts. According to the 1991 census data on language retention, only 6,520 out of 10,759 ethnic Darai or less than two thirds of the Darai still speak the Darai language, which exhibits biactantal verbal morphology. The Danuwar or Danurā are native to Sindhu and Udaypur districts in the Inner Terai, but Danuwar are also settled in the hills of Kābpālānęk and Sindhupālęk districts and in the Terai districts of Sar-lahti, Mahottarī, Dhanuṣā and Sirāhā. According to the 1991 census data on language retention, only 2,721 out of 50,574 ethnic Danuwar or roughly just half of the Danuwar still speak the Danuwar language. The group known as Majhi or Bote live along the Nārāyani or Saptagaṇḍākī river and its tributaries in the districts of Bāglūn, Parvat, Sāyānū, Gālpā, Kāṣkī, Gorkhā, Tanahū, Parsā, Citvan and Navalparāsī, as well as in the Terai and hills of the districts of Rāmchāp, Sindhuli, Sindhu-pālęk, Kābpālānęk and Dhanuṣā. The 1991 census data on language retention show that only 11,322 out of 55,050 ethnic Majhi, or just one fifth of the Majhi, still speak the Majhi language.

A number of other inadequately documented Indo-Aryan languages spoken in the hills of Nepal, the Nepalese Terai and Manipur have now nearly vanished. The Kumāḥī or
Kumhâle language is spoken by a potter's caste in the central Terai and adjacent central hills. The total number of speakers was estimated at 3,500 in the early 1950s, but only 1,413 speakers of the language were counted in the 1991 census. The original language of the Bîtar in the eastern Terai, especially Moran District, may have already vanished. A dwindling number of Ganagûl in eastern Bihar, the eastern Nepalese Terai and West Bengal still speak Aûgîkâ. In Manipur, the Indo-Aryan language known as Bishnupriya Manipuri or Vîsînpriya Manipuri, served as an Indo-Aryan contact language and lingua franca between the thirteenth and nineteenth centuries, which had undergone influence of the Meithei language native to the region. In 1964, there were still reportedly 114 speakers of Bishnupriya Manipuri.

Bibliography

Schleicher, August (1863) Die Darwinsche Theorie und die Sprachwissenschaft: Offenes Schreiben an Herrn Dr. Ernst Hückel, a.o. Professor der Zoologie und Direktor des zoologischen Museums an der Universität Jena, Weimar: Böhla.
Alphabetical list of languages

Aiton (Sām Doānyā) [180] India: Assam state, Lakhimpur and Sibsagar districts and Naga hills. Tibeto-Burman, Daic branch. This Shan ethnic group settled there to flee persecution in the nineteenth century from Burma; numbers unknown but now dwindling; severely endangered.

 Anal [154] India: Manipur state. Tibeto-Burman, Mizo-Kuki-Chin branch. Number of speakers unknown, but rapidly losing ground to Meithhei, the state majority language; severely endangered.

 Angami [131] India: western Nagaland state, Kohima district; Manipur, Maharashtra states. Tibeto-Burman, part of Angami-Pochuri language cluster. Approximately 30,000 speakers; endangered.

 Aūgkā [321] India: Bihar and West Bengal states; also Nepal, eastern Terai. Indo-European, further affiliation uncertain. Number of speakers over 725,000 but declining, owing to general use of Hindi and Maithili. Endangered.

 Apatani [82] India: Arunachal Pradesh state, Apatani Plateau in Subansiri district. Tani language cluster, one of the Western Tani group known collectively as ‘Nishi’. About 14,000 speakers; endangered.

 Ashing [87] India: Arunachal Pradesh state, headwaters of Siyang river near Tibetan border. Nothing is known about it except its name. Less than a thousand speakers; endangered.

 Askun [280] Afghanistan: Kunar province. Indo-European, Nuristani branch. Number of speakers may be up to 7,000; endangered.

 Asur [187] India: Bihar state, Netarhat plateau of Palāmū district, Rāṇčī and Gumlā districts. Austroasiatic, North Munda group. A dialect continuum with a total of about 7,000 speakers; endangered.

 Athphuariya [111] Nepal: Dhankuta district. Tibeto-Burman, Eastern Kiranti group. A continuum of dialects rather than a single language, and Belhare is one of these varieties. Number of speakers small and fast declining for all dialects; moribund.

 Badaga [35a] India: Tamil Nadu state, Nilgiri Hills. Dravidian, South Dravidian group, closely related to Kannada. Over 100,000 speakers, but with no official status; potentially endangered.

 Baghāṭi [301] India: Himachal Pradesh state, Simla district. Indo-European, Western Pahadi branch. May be up to 4,000 speakers. Endangered; little is known about the language.

 Bāltī (sBalti) [237a] India: Jammu and Kashmir state. Tibeto-Burman, Central Bodish branch. Number of speakers unknown, but may be up to 67,000; endangered.

 Baṅgāṇi [298] India: Uttar Pradesh state. Indo-European, Western Pahadi branch. Little is known about the language.

 Bangni (Western Dafī) [79] India: Arunachal Pradesh state, across the Indo-Tibetan border. Tani language cluster. About 23,000 speakers; endangered.

 Bartangi [266] Afghanistan: Badakhshan province. Indo-European, Iranian branch; may be a dialect of Šugnī (q.v.) Number of speakers unknown; endangered.

 Basarkīr (Gūrī) [286] Pakistan: headwaters of Swāt river and Panjkora valley. Indo-European, Dardic branch, Kohistani group. There may be up to 1,500 speakers; endangered.

 Bāṭar [320] Nepal: Moraṇ district. Indo-European, further affiliation uncertain. Moribund or may be already extinct.

 Bawm [166] India: Mizoram and Assam states; also spoken in Bangladesh and Burma. Tibeto-Burman, Mizo-Kuki-Chin branch. Number of speakers unknown; population is shifting to Assamese; severely endangered.

 Bellāri [42] India: Karnataka state, South Kanara district, near Udupi. Dravidian, South Dravidian group. About a thousand speakers; severely endangered.

 Bhadravāhī [311] India: Jammu and Kasimh state. Indo-European, Western Pahadi branch. There may be up to 69,000 speakers; potentially endangered.

 Bhalesī [312] India: Jammu and Kashmir state. Indo-European, Western Pahadi branch. Little is known about the language; may be a dialect of Bhadravāhī above.

 Bharmārī (Gāḍī) [308] India: Himachal Pradesh state, Chamba district; Uttar Pradesh; Jammu and Kashmir. Indo-European, Western Pahadi branch. Bharmārī is regarded by some as a dialect of Gāḍī. Number of speakers up to 120,000; potentially endangered.

 Bhujelī [218] Nepal: Tanahī district. Tibeto-Burman, Chepangic branch. At least 2,000 speakers, but the language is giving way to Nepali, the language of incoming settlers; severely endangered.
Bhunij [29a] India: scattered communities in Bihar, Orissa and Madhya Pradesh states. *Austroasiatic*, North Munda group. Possibly as many as 150,000 speakers in total, but with widespread bilingualism. Potentially endangered.

Birhor [30] India: Bihar state, Simhahāmū, Pālāmū, Ḥazārrābā, Rāṇē districts. *Austroasiatic*, North Munda group; its speakers are semi-nomadic people, assimilating into the Bihari speech community. Less than 2,000 speakers; moribund.

Bishnupriya Manipuri [322] India: Manipur state and elsewhere. *Indo-European*, previously regarded as a Bengali-Meitei creole. There were 114 speakers remaining in 1964; moribund.

Black Mountain [63] Bhutan: Black Mountains of central Bhutan. *Tibeto-Burman*, East Bodish group, but very divergent from other members of this group, possibly not of this group. About 500 speakers in the jungle area; endangered.

Bodo [107] India: Assam, Cachar district. *Tibeto-Burman*, Bodo-Garo language cluster. Speakers of Dimasa and Hojai (q.v.) also refer to themselves by this name. Number of speakers unknown, but rapidly assimilating with Bengali- and Assamese-speaking communities. Highly endangered.

Bori [91] India: Arunachal Pradesh state, on Siyom and Sike rivers. Part of Minyong-Padam subgroup within *Tani language cluster*. About 2,000 speakers; endangered.

Brahui [55] Pakistan: Kalat district and parts of Hyderabad, Karachi and Khairpur districts; also small communities in Afghanistan and Iran. *Dravidian*, North Dravidian group. Approximately half a million speakers. The language has been written for three centuries, in a Persian-based script like Urdu, but its written use is not widespread. Potentially endangered.

Brokpa [248] Bhutan: Sakteng valley, 'Wangdi Phodr’ā district. *Tibeto-Burman*, Central Bodish branch. Number of speakers may be as high as 5,000; endangered.

Bu-rig (Purik) [237b] India: Kashmir, Kargil district. *Tibeto-Burman*, Central Bodish branch. Number of speakers unknown, but may be up to 132,000; declining and endangered.

Burushaski [7] Pakistan: Hunza-Nager and Yasin valleys. *Language Isolate*. Heavily admixed with Urdu and English elements in recent times. Owing to the high degree of local autonomy up to the mid-twentieth century, the language was not declining in use until recently, but the current speech community (estimated at around 80,000) is believed to be dwindling fast. Potentially endangered.

Chantyal [227] Nepal: Myāgdi and Bāglu districts. *Tibeto-Burman*, Tamangic branch. Spoken by only about one fifth of the 10,000 reported ethnic Chantyal. Extinct in some districts already; endangered.

Chathare Limbu [182] Eastern Nepal. *Tibeto-Burman*, Limbu group. Total Limbu population about 300,000, but transfer to younger speakers is not taking place. Severely endangered.

Chepang [217] Nepal: Makvānpur, Citvan and Dhādiān districts. *Tibeto-Burman*, Chepangic branch. Census figures show 25,097 speakers, which is two thirds of the ethnic group, but their forest habitat is now largely uninhabitable and they are being forcefully assimilated among Nepali speakers.

Chiru [151] India: Manipur state. *Tibeto-Burman*, Mizo-Kuki-Chin branch. Number of speakers unknown, but rapidly losing ground to Meitei, the state majority language; severely endangered.

Cho-ca-nga-ca-kha [61] Bhutan: Monggar and Lhuntsi districts. *Tibeto-Burman*, South Bodish group. A close relative of the national language Dzongkha, with which it is being assimilated. About 20,000 speakers; endangered.
Chokri [132] India: Nagaland state, around Cheswezumi village. Tibeto-Burman, Angami-Pochuri language cluster. Closely related to Angami; number of speakers unknown but may be up to 20,000; endangered.

Chorei [165] India: Manipur, Assam and Tripura states. Tibeto-Burman, Mizo-Kuki-Chin branch. Number of speakers is unknown but small, and shifting to Assamese or Bengali; severely endangered.

Chungli Ao [124] India: Nagaland state. Tibeto-Burman; the closely related Ao sub-group has a total number of about 65,275. Transfer to an Assamese-based creole is general among Ao speakers; severely endangered.

Dakpa [62] India and Bhutan: Arunachal Pradesh state, Tawang district, straddling the Bhutanese border. Tibeto-Burman, East Bodish group. A few thousand speakers; endangered.

Dameli [293] Pakistan: Damel valley. Indo-European, Dardic branch. Spoken in one remaining village; severely endangered.

Danuwar [316] Nepal: Inner Terai district. Indo-Aryan, further affiliation uncertain. Distinct from but related to the language of the same name spoken in India (Madhya Pradesh, Maharashtra). Number of speakers in 1991 census was 23,721, less than half of the ethnic group, which is rapidly assimilating to the Nepali-speaking community. Severely endangered.

Dara [317] Nepal: Inner Terai district. Indo-Aryan, further affiliation uncertain. Number of speakers in 1991 census was 6,520, just over half of the ethnic group, which is rapidly adopting Nepali. Severely endangered.

Darma [235] India and Nepal: Himachal Pradesh state, Almōdā and Phithaurūgāḍh districts in India and Dārcuḷā district in Nepal. Tibeto-Burman, West Himalayish branch. 1,761 speakers recorded at beginning of twentieth century but no figures since then; thought to be endangered.

Deori Chutiya [101] India: Assam state, Lakhimpur and Sibsagar districts (formerly also Arunachal Pradesh). Tibeto-Burman, Bodo-Koch branch; Deori and Chutiya are two separate clans sharing a common language. Rapidly declining, a few thousand speakers left; severely endangered.

Dhimal [115] Nepal: Jhāpā and Moraṇ districts. Tibeto-Burman, Dhimalish language cluster. Estimates of number of speakers vary from 16,000 to 35,000, but the language is giving way to Nepali and is a minority in its own districts. Severely endangered.

Dhimmui (Miṣì) [76] India: Arunachal Pradesh state, Kameng district, Bichom and Pakesa river valleys. Hrusih language cluster. About 4,000 speakers; severely endangered.

Dimasa (Hills Kachari) [104] India: Assam, North Cachar district. Tibeto-Burman, Bodo-Garo language cluster. Speakers largely assimilated into Bengali and Assamese communities; a few isolated households remain. Probably moribund.

Dimli (Zaza) [261] Iran and Turkey: upper Euphrates river. Indo-European, Iranian branch. Total number of speakers in both countries about 1,000,000. No institutional support in either country.

Dol-po (Dööpo) Nepal: Dolpa district up to Tibetan border. Tibeto-Burman, Central Bodish branch. Closely related to Tibetan. Number of speakers unknown but may be around 5,000; endangered.

Drānjoke [241] India: Sikkim. Tibeto-Burman, South Bodish group. Former national language of the kingdom of Sikkim before it was annexed by India in 1975, since when it has been swamped by immigration from Nepal. Number of first-language speakers unknown, but already moribund.

Duni [204] Nepal: upper reaches of Dūḍhkṣi river. Tibeto-Burman, Western Kiranti branch. Fewer than eight speakers remain, all elderly; moribund.

Dura [221] Nepal: Lamjūn, between Pāūdi and Midim rivers. Tibeto-Burman, further affiliation unidentified. Last speakers died sometime after 1980; recently extinct. Some data were collected on the language.

Dzongkha [58] Bhutan. Tibeto-Burman, South Bodish group. The official national language of Bhutan, but marginalised by the official use of English. 260,000 speakers. The language is potentially endangered.

Falam Chin [161] India: Assam, Tripura and Mizoram states; also spoken in Burma. Tibeto-Burman, Mizo-Kuki-China branch. Numerous dialect divisions. Number of speakers in India unknown, but may be about 23,000; severely endangered.

Gadaba [54] India: Orissa state, Korāpuṭ district. Dravidian, Central Dravidian group. Approximately 40,000 speakers of its various dialects; potentially endangered. Not to be confused with the unrelated South Munda language also known as Gubọ (see below).

Gallong [83] India: Arunachal Pradesh state, West Siang district up to border of Assam. Tani language cluster. About 40,000 speakers; endangered.

Gangte [152] India: Manipur. Tibeto-Burman, Mizo-Kuki-Chin branch. Number of speakers unknown, but rapidly losing ground to Meithei, the state majority language; severely endangered.

Garhwal [314a] India: Kashmir and Uttar Pradesh. Indo-European, Central Pahadi branch. Number of speakers over two million, but with little institutional support or prestige the language is potentially endangered.

Garo [109] India: Meghalaya state, Garo Hills; Assam state, Goalpara and Kamrup districts; Bangladesh, Mymensing district and in Modhupur. Tibeto-Burman; the most viable of the Bodo-Garo language cluster, with a total of about 265,000 speakers, but endangered.

Gawar-Bātī (Narisātī) [294] Pakistan: southern Chitral valley. Indo-European, Dardic branch. Spoken by up to 1,500 people in a few villages on the Kunar river. Endangered.

Geta? (Gia?, Dideyi, Didam) [26] India: Andhra Pradesh state, East Godāvārī district, both sides of Sileru river. Austroasiatic, South Munda group. About 3,000 speakers, bilingualism widespread; endangered.

Ghale [228] Nepal: Gorkhā and Dhādī districts. Tibeto-Burman, possibly Tamangic but affiliation uncertain. About 12,000 speakers in 1975, and slowly declining despite the remoteness of the community; potentially endangered.

Gilaki [257] Iran: Gilaki region of Caspian littoral. Indo-European, Iranian branch. About 3,265,000 speakers but unwritten and with no institutional support; potentially endangered.

Gōndī [45] India: scattered parts of Madhya Pradesh, Maharashtra, Orissa, northern Andhra Pradesh states. Dravidian, Central Dravidian group. Over two million speakers in total, but potentially endangered.

Gongduk [70] Bhutan: Monggar district, one enclave along the Kurichu river. A distinct group within Tibeto-Burman, only discovered by scholars in 1991, retaining many archaic Tibeto-Burman features. Approximately 1,000 speakers. Now that Bhutanese infrastructure is opening up this remote territory to outsiders, it is potentially endangered.

Gurani (Hawrami) [260] Iran: Kordestan province. Indo-European, Iranian branch. Also spoken in Iraq. Number of speakers unknown; thought to be endangered.

Haka Chin [162] India: Mizoram, Assam and Meghalaya states; also spoken in Burma. Tibeto-Burman, Mizo-Kuki-Chin branch. Numerous dialect divisions. Number of speakers unknown, but Haka is the most widely spoken of the Chin sub-branch. Endangered.

Hauñđōri [303] India: Himachal Pradesh state, Simla and Solan districts. Indo-European, Western Pahadi branch. Only a few speakers remain; moribund.

Hmar [168] India: Assam, Manipur and Mizoram states. Tibeto-Burman, Mizo-Kuki-Chin branch. Number of speakers unknown, but there is general bilingualism in Assamese; severely endangered.

Ho (Kol) [29] India: Bihar state, Simhabhūm district. Austroasiatic, North Munda group. Over 400,000 speakers, but widespread bilingualism. Potentially endangered.

Hoijai [105] India: Assam state, Cachar hills. Tibeto-Burman, Bodo-Garo language cluster. Not described, probably closely related to Dimasa. Severely endangered or moribund.

Hrangkol [164] India: Manipur, Assam and Tripura states. Tibeto-Burman, Mizo-Kuki-Chin branch. Number of speakers is unknown but small, and shifting to Assamese or Bengali; severely endangered.

Hruso (Aka) [75] India: Arunachal Pradesh state, Kameng district, Bichom river valley. Hrusish language cluster. Less than 3,000 speakers; severely endangered.

Hruso (Aka) [75] India: Arunachal Pradesh state, near Digaru river. Diguish language cluster. Estimated to have 9,000 speakers; severely endangered.

Idu [99] India: Arunachal Pradesh state, near Digaru river. Diguish language cluster. Estimated to have 9,000 speakers; severely endangered.

GEOERGE VAN DRIEM

Iškāšī [273] Afghanistan: Sanglech valley; Tajikistan. Indo-European, Iranian branch. Number of speakers may exceed 1,000; grouped together with its close relative Sanglīč (q.v.); endangered.

Jād [237f1] India: Himachal Pradesh state, on Bhāğrattī river, resettled from Tibetan border in 1962. Tibeto-Burman, Central Bodish branch; considered a dialect of Tibetan by some. Number of speakers unknown; endangered.

Jarawa [3] India: spoken in the interior of South Andaman, Andaman Islands. Language Isolate. One of three surviving Andamanese languages of more than a dozen known during British colonial times. Extremely endangered; thirty-one speakers recorded in 1981 census of India.

Jaunsari [299] India: Uttar Pradesh state. Indo-European, Western Pahadi branch. Little is known about the language.

Jero [203] Nepal: along Sunkōśi river. Tibeto-Burman, Western Kiranti branch, Chaurasiya group. The two Chaurasiya languages have a total of 15,000 speakers; endangered.

Jirel [251] Nepal: Dolakha district. Tibeto-Burman, Bodish branch. Poorly documented. Number of speakers may be around 8,000; endangered.

Jumowa [60] India and Tibet: between Sikkim and Bhutan in the Chumbi valley. Tibeto-Burman, South Bodish group. Number of speakers unknown, but moribund or extinct.

Kadu [171] India: Manipur state and across into Burma. Tibeto-Burman, Kachinich branch. Sak subgroup. No known speakers left; moribund or possibly extinct.

Kalaśa [292] Pakistan: southern Chitrāl district. Indo-European, Dardic branch. Number of speakers unknown, but in the thousands; endangered.

Kaman (Mīju Mishmi) [97] India and Tibet: Arunachal Pradesh state, Lohit district, banks of the Lohit river. Part of the small Midwhiš language cluster. About 9,000 speakers; endangered.

Kanashi [232] India: Himachal Pradesh state, Kulu district. Tibeto-Burman, West Himalayish branch. Number of speakers unknown, but spoken in only one village; endangered.

Kāṅff [307] India: Himachal Pradesh state. Indo-European, Western Pahadi branch. Little is known about the language.

Karbi (Mikir) [123] India: Assam state, Karbi Anglong, Kamrup, Nowgong and Sibsagar districts. A separate subgroup within the Tibeto-Burman family. Speakers number over 150,000, but bilingualism in Assamese is widespread and there is a rapid process of shift to that language.

Karko [93] India: Arunachal Pradesh state, Siang district. Part of Mīnyong-Padam subgroup within Tani language cluster. About 2,000 speakers; endangered.

Kati (Bashgal) [277] Afghanistan: Bashgal valley; Pakistan. Indo-European, Nuristani branch. The largest number of speakers in this branch, about 20,000; endangered.

Kham [216] Nepal: Rukum and Rolpā districts. Tibeto-Burman, Magaric branch; also known as Northern Magar. About 30,000 speakers, and though endangered, faring better than the Magar dialects.

Khampti [176] India: Assam state, Lakhimpur district; Arunachal Pradesh, Lohit district. Tibeto-Burman, Daic branch. Number of speakers unknown but dwindling; severely endangered.

Khārīa [21] India: Bihar, West Bengal, Orissa, Assam and Madhya Pradesh states. Austroasiatic, South Munda group. A dialect continuum in scattered communities over a wide area; bilingualism with majority languages is widespread. The total number of speakers is over 190,000. Potentially endangered.

Khasāli [313] India: Jammu and Kashmir state. Indo-European, West Pahadi branch. Little is known about the language.

Kheng [64b] Bhutan: Kheng district, also known as Zh’āmang, south of Bumthang. Tibeto-Burman, East Bodish group. About 40,000 speakers; potentially endangered.

Khεza [133] India: eastern Nagaland, Kohima district. Tibeto-Burman, Angamipochuri language cluster. Number of speakers unknown but may be up to 23,000; endangered.
Khiamngan [119] India: Nagaland state, precise location unknown. *Tibeto-Burman*, Konyak language cluster. Number of speakers also unknown, but thought to be endangered.

Khoirao [145] India: northern Manipur state, Senapati district. *Tibeto-Burman*, Zeme language cluster. No census data available; endangered because of language shift to Meithei, the state language of Manipur.

Khowa (Bugun) [71] India: Arunachal Pradesh state, West Kameng district, confined to two villages. *Kho-Bwu* language cluster. About 800 speakers; severely endangered.

Khowir [291] Pakistan: Chitral valley and neighbouring valleys. *Indo-European*, Dardic branch. The main language of the valley, spoken by up to 222,800 people; potentially endangered.

Khowar [291] Pakistan: Chitral valley and neighbouring valleys. *Tibeto-Burman*, Potan group. A dialect continuum spoken in scattered enclaves, not researched at all but thought to be endangered.

Khowar [233] India: Himachal Pradesh state, Kinnaur district. *Tibeto-Burman*, West Himalayan branch. In 1981 there were 59,154 ethnic Kinnauri recorded, but proportion of speakers not known; thought to be endangered.

Ko~agu [38) India: Karnataka state, named after the district where it is spoken, Koppal district. *Dravidian*, Central Dravidian group. About 109,000 speakers, Untouchables who are bilingual in Kannada. Recently discovered, and severely endangered.

Ko~agu [27] India: Madhya Pradesh state, mainly in the Satpuda and Mahadev hills. *Austroasiatic*, North Munda group. About 200,000 speakers, who are rapidly assimilating with speakers of larger (Indo-Aryan) languages. Potentially endangered.

Koda [31] India: Nagpur district. *Dravidian*, South Dravidian group. Total number of speakers, who are nomadic tribesmen, about 80,000; endangered.

Koda [102] India: Tripura state. *Tibeto-Burman*, Bodo-Garo language cluster. Once a majority in the state, the Kukborok speakers now account for just 30 per cent of the population (an estimated 800,000 claim ethnicity, but the majority have abandoned the language) owing to the influx of Bengali speakers. Endangered.

Kolami [150] India: Manipur state. *Tibeto-Burman*, Mizo-Kuki-Chin branch. Number of speakers unknown, but rapidly losing ground to Meithei, the state majority language; severely endangered.

Ko~agu (Ko~) [46] India: Andhra Pradesh state, Visakhapatnam and Srikkakulam districts, and Orissa state, Koraput district. *Dravidian*, Central Dravidian group. Spoken by 15,000 members of the Konda Dora tribe; endangered.

Kothari [43] India: Karnataka state, Kandapura district. *Dravidian*, South Dravidian group. About 1,000 speakers, who are rapidly assimilating with speakers of larger (Indo-Aryan) languages. Potentially endangered.

Korava, Erenga) [34] India: Madhya Pradesh state (Raigad, Sarguja districts), Bihar state (Palamu and Hazaribagh districts). *Austroasiatic*, North Munda group. A dialect continuum with over 35,000 speakers, widespread bilingualism; potentially endangered.

Kota [35a] India: Tamil Nadu state, Kottagiri district of Nilgiri Hills. *Dravidian*, South Dravidian group. About 1,000 speakers; endangered.

Ko~agu (Ko~) [49] India: Orissa state, Gajam, Boudh-Kondham, Koraput districts; Andhra Pradesh. *Dravidian*, Central Dravidian group. Together with Ko~agu, speakers, who are members of the Kondho scheduled tribe, make up half a million. Some writing of missionary tracts in Roman and Oriya scripts; potentially endangered.

Kulu [304] India: Himachal Pradesh state, Kullu district. *Indo-European*, Western Pahari branch. Number of speakers may be up to 109,000; potentially endangered.

Kum(h)ale [319] Nepal: Gorkhā district. *Indo-Aryan*, further affiliation uncertain. The 1991 census showed 1,413 speakers, a sharp decline in forty years; severely endangered.

Kum(h)ale [319] Nepal: Gorkhā district. *Indo-Aryan*, further affiliation uncertain. The 1991 census showed 1,413 speakers, a sharp decline in forty years; severely endangered.

Kum(h)ale [319] Nepal: Gorkhā district. *Indo-Aryan*, further affiliation uncertain. The 1991 census showed 1,413 speakers, a sharp decline in forty years; severely endangered.

Kum(h)ale [319] Nepal: Gorkhā district. *Indo-Aryan*, further affiliation uncertain. The 1991 census showed 1,413 speakers, a sharp decline in forty years; severely endangered.
Kuruba [40] India: Karnataka state, Coorg district. Dravidian, South Dravidian group. About 1,000 speakers, consisting of the small Betta-Kuruba tribe, the remainder of the Kuruba tribes having gone over to Kannada. Endangered.

Kurukh (Kurux, Oroon, Uraon) [57] India: Bihar state (Chotā Nagpur district), Madhya Pradesh, Orissa, West Bengal states; also scattered dialects in Assam and Nepal. In Assam the scattered speakers are referred to as Adibasis (‘aborigines’), a term also applied to speakers of unrelated languages. Dravidian, North Dravidian group. Approximately 1.5 million speakers of all dialects. Potentially endangered.

Kui [50] India: Orissa state, Koraput, Kalahandi, Gaṅgā districts; Andhra Pradesh state, Visākhāpattam district. Dravidian, Central Dravidian group. Together with Kū, speakers, who are members of the Kondho scheduled tribe, make up half a million. Some writing of missionary tracts in Roman and Oriya scripts; potentially endangered.

Ladakhi (La-dwags) [237c] India: Jammu and Kashmir state, Ladakh district. Tibeto-Burman, Central Bodish branch. Number of speakers unknown, but may be up to 102,000; declining and endangered.

Lāfūl [13] India: Nicobar Islands, Trinkut island. Austroasiatic, Nicobarese group. Number of speakers unknown due to lack of census data, thought to be endangered.

Lakha [249] Bhutan: 'Wangdi Phodr’a district. Tibeto-Burman, Central Bodish branch. Number of speakers estimated at 8,000; endangered.

Lakhe [156] India: Mizoram state. Tibeto-Burman, Mizo-Kuki-Chin branch. Number of speakers unknown; assimilating into larger Mizo-speaking community; severely endangered.

Lamgang [153] India: Manipur state. Tibeto-Burman, Mizo-Kuki-Chin branch. Number of speakers unknown, but rapidly losing ground to Meithi, the state majority language; severely endangered.

Lāmongshe [17] India: Nicobar Islands, Condul. Austroasiatic, Nicobarese group. Number of speakers unknown due to lack of census data, thought to be endangered.

Lepcha [69] India: Sikkim, plus Darjeeling district, parts of eastern Nepal, and Samtsi district in southwest Bhutan. A distinct group within Tibeto-Burman, with its own script and literary tradition going back at least three centuries. Once the primary language of Sikkim, now giving way everywhere to Nepali, with which bilingualism is the norm. Number of speakers now reduced to a few thousand; highly endangered.

Levai (Bongo) [77] India: Arunachal Pradesh state, Kameng and Subansiri districts. Hrusish language cluster. About 1,000 speakers; severely endangered.

Lo'ong [15] India: Nicobar Islands, spoken on coast of Great Nicobar island. Austroasiatic, Nicobarese group. Number of speakers unknown due to lack of census data, thought to be endangered.

Lotha [128] India: Nagaland state. Tibeto-Burman; the closely related Ao subgroup has a total number of about 65,275, of whom Lotha accounts for about 35,000. Transfer to an Assamese-based creole is general among Ao speakers; severely endangered.

Magar [215] Nepal: Pālpā, Syānṣā, Tanahā and Gorkhā districts. Tibeto-Burman, Magaric branch. A relatively numerous and widely dispersed ethnic group, but less than a third of the well over one million ethnic Magar now retain the language, which is giving way to Nepali. Great dialectal variation. Endangered

Mahāsāl [302] India: Himachal Pradesh state, Simla and Solan districts. Indo-European, Western Pahadi branch. Part of a dialect continuum which may have a total of half a million speakers, but which is little known and endangered.

Mainā (Kohistani) [288] Pakistan: Indus Kohistani district. Indo-European, Dardic branch. There may be up to 220,000 speakers; potentially endangered.

Majhi (Bote) [318] Nepal: several districts along the rivers Nārāyān and Saptaganḍākā. Indo-Aryan, further affiliation uncertain. Number of speakers according to
Maluri [136] India: Nagaland state. *Tibeto-Burman*, Angami-Pochuri language cluster. Known also as ‘Eastern Rengma’, though Rengma is a different language. Number of speakers unknown; moribund or even extinct.

Manydeli [305] India: Himachal Pradesh state, Mandi district. *Indo-European*, Western Pahadi branch. Number of speakers 776,372 in 1991 census, but the language is not in general public use; potentially endangered.

Maram [146] India: Assam and northern Manipur states. *Tibeto-Burman*, Zeme language cluster. Number of ethnic Maram given as 19,968 in 1971 census, but a general shift to Meitei, the state language of Manipur, may have reduced the number of speakers; endangered.

Miloh [18] India: Nicobar Islands, Milo. *Austroasiatic*, Nicobarese group. Number of speakers unknown due to lack of census data, thought to be endangered.

Minyong [90] India: Arunachal Pradesh state, west bank of lower Siang river. Part of Minyong-Padam subgroup within the *Tani language cluster*. About 20,000 speakers; endangered.

Mising (‘Plans Miri’) [96] India: Arunachal Pradesh state, spoken on plains in scattered settlements. Part of Minyong-Padam subgroup within *Tani language cluster*. Fewer than 4,000 speakers; endangered.

Mongsen Ao [125] India: Nagaland state. *Tibeto-Burman*; the closely related Ao subgroup has a total number of about 65,275. Transfer to an Assamese-based creole is general among Ao speakers; severely endangered.

Mru [169] Bangladesh: Chittagong hills. A separate class within *Tibeto-Burman*. Number of speakers estimated at 40,000, but losing ground to Bengali; severely endangered.

Mupądari (Horö) [28] India: a dialect continuum including Hasada?, Naguri, Latar and Kera?; spoken in Bihar state (Rânci, Simhabhûm, Manbhûm, Hazârück, Pûlâm districts), northern Madhya Pradesh and Orissa states. *Austroasiatic*, North Munda group. Total number of speakers about 750,000, bilingualism widespread; potentially endangered.

Nancowry [12] India: Nicobar Islands, Nancowry and Camorta islands. *Austroasiatic*, Nicobarese group. Number of speakers unknown due to lack of census data, thought to be endangered.

Newar [211] Nepal: Kathmandu valley. *Tibeto-Burman*, Newaric branch. Can be divided into four distinct varieties: Kathmandu and Patan; Bhaktapur; Pani; and Dolakha.
Originally the dominant language of the Kathmandu valley, and with over a million ethnic Newar and a long literary tradition, yet the language is yielding rapidly to Nepali. Endangered.

Nepalami [295] Afghanistan: on the Pech river. Indo-European, Dardic branch. Spoken in the village of Nepalām, but few, if any, speakers left; thought to be moribund.

Nishi (Eastern Dafla) [80] India: Arunachal Pradesh state, Subansiri district. Tani language cluster. About 30,000 speakers; endangered. ‘Nishi’ is also used as a general term for the western Tani languages, such as Tagin and Apatani.

Nruanghme [142] India: northwestern Manipur, Nagaland state. Tibeto-Burman; Zeme language cluster. No reliable census information; severely endangered.

Ntenyi [136] India: central Nagaland state. Tibeto-Burman, Angami-Pochuri language cluster. Number of speakers unknown, but may be up to 6,600; endangered.

Nuphiuka [64c] Bhutan: Bumthang district, area around Trongsa. Tibeto-Burman. East Bodish group. Also regarded as the western dialect of Bumthang (see entry) and means ‘language of the west’. Potentially endangered.

Nyenka (Henkha, Mangdebi-kha) [65] Bhutan: Mangde river valley. Tibeto-Burman, East Bodish group, highly divergent within the group. About 10,000 speakers; potentially endangered.

Nyishangba [225a] Nepal: Manang valley. Tibeto-Burman, Tamangic branch. Possibly 2,000 or more speakers; endangered.

Ong [16] India: Nicobar Islands, Little Nicobar island. Austroasiatic, Nicobarese group. Number of speakers unknown due to lack of census data; thought to be endangered.

Önge [1] India: spoken on Little Andaman, Andaman Islands. Language Isolate. One of three surviving Andamanese languages of more than a dozen known during British colonial times. Extremely endangered; ninety-seven speakers recorded in 1981 census of India.

Ormuri [263] Afghanistan: Baraki-Barak area; Pakistan, Kanigram area. Indo-European, Iranian branch. There may be as few as fifty speakers left out of an ethnic group of several thousand; severely endangered or moribund.
Phom [118] India: southwestern Nagaland state. Tibeto-Burman, Konyak language cluster. About 19,000 speakers; endangered.

Pochuri [135] India: southeastern Nagaland state, Phek district. Tibeto-Burman, Angami-Pochuri language cluster. Number of speakers unknown, may be up to 13,000. Endangered.

Pū [8] India: Nicobar Islands, Car Nicobar island. Austroasiatic, Nicobarese group. Number of speakers unknown due to lack of census data, thought to be endangered.

Rabha [113] India: Meghalaya and Assam states, along Brahmaputra river. Tibeto-Burman, Koch language cluster. Number of speakers is only a small proportion of possibly 375,000 ethnic Rabha; bilingualism in Assamese is general. Endangered.

Raji [219] Nepal: formerly Terai and Pithaurāgadh (India) districts, now resettled in Dāṅ-Deukhurī district. Tibeto-Burman, further affiliation unidentified. A small population (3,274 ethnic Raji in Nepal reported in 1988) which has been resettled and largely lost its ancestral language in the process. Severely endangered or moribund.

Ramo [86] India: Arunachal Pradesh state, West Siang district, upper Siyom valley. Tani language cluster. Less than 800 speakers; endangered.

Rango (Rongpo) [234] India: Cāmolī district. Tibeto-Burman, West Himalayish branch. Estimated number of speakers 12,000; endangered.

Rante [220] Nepal: formerly nomadic, now resettled in Dāṅdeldhurā district. Tibeto-Burman, further affiliation unidentified. The Rante (2,878 ethnic members in 1991 census of Nepal) have largely lost their language as a result of resettlement; severely endangered or moribund.

Rengma [139] India: central Nagaland and Assam and Manipur states. Tibeto-Burman, Angami-Pochuri language cluster. Number of speakers uncertain, wide dialectal variation reported; endangered.

Rošāni [265] Afghanistan: Badakhshan province. Indo-European, Iranian branch; may be a dialect of Sughnī (q.v.) Number of speakers unknown; endangered.

Rošorvī (Oroshori) [267] Afghanistan: Badakhshan province. Indo-European, Iranian branch; may be a dialect of Sughnī (q.v.). Number of speakers unknown; endangered.

Ruga (Rugha) [112] India: Meghalaya state, southern Garo hills. Tibeto-Burman, Koch language cluster. Number of speakers unknown; endangered.

Sak [170] Bangladesh: Chittagong hills up to Burmese border. Tibeto-Burman, Kachinic branch, Sak sub-group. Number of speakers was 1,500 in 1981; severely endangered.

Sām [194] Nepal: Sānkhuva Sābhā and Bhojpur districts, along Irkuva river. Tibeto-Burman, Central Kiranti group, Khambu language cluster. Number of speakers unknown, if any; moribund or extinct.

Sampang [192] Nepal: Khoṭāṅ and Bhojpur districts. Tibeto-Burman, Central Kiranti group, Khambu language cluster. Number of speakers unknown. Bilingualism in Nepali is general; about a thousand speakers, severely endangered because of lack of transfer to younger generation.

Sanglicī [272] Afghanistan: Sanglech valley; Tajikistan. Indo-European, Iranian branch. Up to 2,000 speakers in Afghanistan and 500 in Tajikistan. Endangered; may be regarded as a single language with Iskāśī (q.v.).

Sangtam [126] India: Nagaland state. Tibeto-Burman; the closely related Ao subgroup has a total number of about 65,275. Transfer to an Assamese-based creole is general among Ao speakers; severely endangered.

Sāwi [283a] Pakistan: Chitrā valley; originally refugees from Afghanistan. Indo-European, Dardic branch. Number of speakers unknown, but up to 3,000 may have returned to Afghanistan in recent years. Endangered.

Seke [224a] Nepal: Kāli Gānjakā river valley. Tibeto-Burman, Tamangic branch. Closely related to Thakali and located upstream from it, and with about 7,000 speakers. Potentially endangered.

Sema [138] India: Assam and central and southern Nagaland states. Tibeto-Burman, Angami-Pochuri language cluster. The most widely spoken language in this group, with 65,000 speakers estimated; endangered.
Semnani [257] Iran: Caspian littoral. Indo-European, Iranian branch. Number of speakers unknown; thought to be endangered.

Sentinelese [2] India: spoken on North Sentinel Island, Andaman Islands. Language Isolate. One of three surviving Andamanese languages of more than a dozen known during British colonial times. No census data available, but a few speakers may survive. Moribund.

Sherdukpen [74] India: Arunachal Pradesh state, Kameng district. Kho-Bwa language cluster; spoken in a few villages by less than 2,000 speakers. Severely endangered.

Sherpa [247] Nepal: Solukhumbu district and around Mt. Everest. Tibeto-Burman, Central Bodish branch. Regarded as a dialect of Tibetan in Nepal. Number of speakers inside and outside Nepal up to 50,000; potentially endangered as it is not being passed on to younger generation.

Shimong [92] India: Arunachal Pradesh state, Siang district, left bank of Siang river. Part of Minyong-Padam subgroup within Tani language cluster. About 2,000 speakers, endangered.

Shingsaba (Lhom) [214] Nepal: Sañkhuvá Sabhá district as far as Tibetan border. Tibeto-Burman, but exact affiliation uncertain. Little is known of the language or the remote and isolated people, of whom there may be around 4,000. State of endangerment unknown.

Shompen [19] India: Nicobar Islands, hinterland of Great Nicobar island. Austroasiatic, Nicobarese group, the most divergent of these languages. Number of speakers unknown due to lack of census data; thought to be endangered.

Sirmauñi [300] India: Himachal Pradesh state. Indo-European, Western Pahadi branch. Little is known about the language; it may have up to 14,000 speakers.

Sora (Saora, Savara) [22] India: southern Orissa state Korápu and Gajján districts, parts of Andhra Pradesh. Austroasiatic, South Munda group. Over 300,000 speakers, but bilingualism is widespread. Potentially endangered.

Spiti (sBi-tí) [237d] India: Himachal Pradesh state, along Tibetan borders. Tibeto-Burman, Central Bodish branch. Regarded as a dialect of Tibetan by some. Number of speakers unknown; potentially endangered.

Sülung (Puroit) [72] India: Arunachal Pradesh state, East Kameng and Lower Subansiri districts. Kho-Bwa language cluster. Warfare and slavery have reduced the number of speakers, who are semi-nomadic and now number about 4,000. Severely endangered.

Šünäši [296] Afghanistan/Pakistan borders: Chitral area. Indo-European, Dardic branch. Spoken in part of one village; there may be up to 1,000 speakers; severely endangered.

Surel [210] Nepal: Dolakhá district. Tibeto-Burman, Northwestern Kiranti branch. Spoken in only one village by a few hundred people; severely endangered.

Tagin [81] India: Arunachal Pradesh state, Subansiri and West Siang districts. Tani language cluster. About 25,000 speakers; endangered.

Taihlong [10] India: Nicobar Islands, Teressa island. Austroasiatic, Nicobarese group. Number of speakers unknown due to lack of census data, thought to be endangered.

Tai Nora (Khamyang) [178] India: Assam state, Sibsagar district. Tibeto-Burman, Daic branch. Number of speakers unknown but dwindling; the remaining speakers refer to themselves as Khamyang. Severely endangered.

Tai Phake (Phákia) [177] India: Assam state, Tinsukia and Dibrugarh districts. Tibeto-Burman, Daic branch. Approximately 2,000 speakers; general bilingualism in Assamese; severely endangered.

Tai Rong (Tai Long) [179] India: Assam state, Sibsagar district. Tibeto-Burman, Daic branch. A Northern Shan group who migrated from Burma in 1825, now dwindling; number uncertain; severely endangered.

Tamang [223] Nepal: dispersed throughout central and eastern hills. Tibeto-Burman, Tamangic branch. Nearly 90 per cent of over one million ethnic Tamang retain the language, but like all minority Nepalese languages it lacks institutional support; potentially endangered.

Tamarkhole Limbu [184] Eastern Nepal. Tibeto-Burman, Limbu group. The total Limbu population is about 300,000, but transfer to younger speakers is not taking place. Severely endangered.
Tangam [89] India: Arunachal Pradesh state, west bank of Siang river. Part of Padam-Minyong subgroup within Tani language cluster. Very few speakers left as the community are victims of genocide by neighbouring tribes. Moribund.

Tangkhul [147] India: northeastern Manipur state. Tibeto-Burman, Tangkhul language cluster. The 1971 census showed 58,167 ethnic Tangkhul, but owing to a rapid shift to the state language Meithei, it is nearly extinct.

Tangsa [121] India: Nagaland state, Tirap district, Changland and Miao subdivisions. Tibeto-Burman, Konyang language cluster; its three dialects, Joghi, Moklum and Lunchang, may be regarded as separate languages. Each dialect has over a thousand speakers, but numbers are declining; endangered.

Taraon [100] India: Arunachal Pradesh state, between Delei, Lati, Kharem and Digaru rivers. One of two members of the Digarish language cluster. Estimated to have 6,000 speakers; severely endangered.

Tatet [9] India: Nicobar Islands, Chowra island. Austroasiatic, Nicobarese group. Number of speakers unknown due to lack of census data; thought to be endangered.

Tati [253] India: Nagaland state. Tibeto-Burman, the closely related Ao subgroup has a total number of about 65,275. Transfer to an Assamese-based creole is general among Ao speakers; severely endangered.

Tengsa [130] India: Nagaland state. Tibeto-Burman; the closely related Ao subgroup. Number of speakers unknown due to lack of census data; thought to be endangered.

Thadou [149] India: Manipur state. Tibeto-Burman, Mizo-Kuki-Chin branch. Number of speakers unknown, but rapidly losing ground to Meithei, the state majority language; severely endangered.

Thakali [224] Nepal: Kāli Gandakī river valley. Tibeto-Burman, Tamangic branch. According to the 1991 Nepalese census there were 7,113 speakers; the number is declining because of economically motivated emigration from the valley. Potentially endangered.

Thangmi [213] Nepal: Dolakhā and Sindhivālīcok districts. Tibeto-Burman, Newaric branch. About 30,000 speakers, but not generally being passed to younger generation; endangered.

Thulung [200] Nepal: southern Solukhumbu district. Tibeto-Burman, Western Kiranti branch, the only member of the Midwestern subgroup. Estimated number of speakers 8,000, but the language is not being passed on; endangered.

Tiddim Chin [160] India: Mizoram state. Tibeto-Burman, Mizo-Kuki-Chin branch; also spoken in Burma. Number of speakers in India unknown; endangered.

Tilung [201] Nepal: Khoştān district. Tibeto-Burman, Western Kiranti branch. Only its name and approximate location are known. Number of speakers unknown but very few remain; moribund.

Tirāhi [289] Afghanistan: southeast of Jalalabad. Indo-European, Dardic branch. A few speakers left out of an ethnic group of up to 5,000, in a few remaining villages; moribund.

Tiwa (Lalang) [103] India: Tripura state, Kamrup and Marigaon districts and in the Karbi Anglong hills. Tibeto-Burman, Bodo-Garo language cluster. About 35,000 speakers; endangered.

Toda [36] India: western Tamil Nadu state, Nilgiri Hills, near Ootacamund. Dravidian, South Dravidian group, closely related to Tamil and Malayalam. About a thousand speakers; unwritten; endangered.

Torwái [287] Pakistan: both sides of Swat river, Swat Kohistan. Indo-European, Dardic branch, Kohistani group. May have up to 60,000 speakers; endangered.

Tulu [32] India: Kerala and Karnataka states, coastal areas as far as North Kanarā district. Dravidian, South Dravidian group. One of the few minor Dravidian languages committed to writing, using an adapted form of the Grantha script like Malayalam, since 1842. Over one million speakers, but potentially endangered.

Turi [32] India: West Bengal and Bihar (Palamlī, Rāṅīći, Sīṃhabhūm, Rāygaḍ, Chatīsghādi districts). Austroasiatic, North Munda group. Number of speakers unknown, but in the thousands; endangered.

Vaiphei [159] India: Assam and southern Manipur states. Tibeto-Burman, Mizo-Kuki-Chin branch. Number of speakers unknown, but no more than 21,000; severely endangered.

Waigali [279] Afghanistan: southeast Nuristan, Kunar province. Indo-European, Nuristani branch. May be up to 8,000 speakers; endangered.

Wakhi [270] Afghanistan: Pamir mountains. Indo-European, Iranian branch. Spoken in villages along the Panj river; number of speakers may be up to 7,000. Endangered.

Wambule (Ombule) [202] Nepal: confluence of Dādhkōś and Sunkōś rivers. Tibeto-Burman, Western Kiranti branch, Chaurasiya group. The two Chaurasiya languages have a total of 15,000 speakers; endangered.

Yachan [129] India: Nagaland state. Tibeto-Burman; the closely related Ao subgroup has a total number of about 65,275. Transfer to an Assamese-based creole is general among Ao speakers; severely endangered.

Yakkha [185] Nepal: Tehrathum, Sańskhuwa Sabhā, Dhanukutā districts. Tibeto-Burman, Eastern Kiranti group. Spoken by a few households; on the verge of extinction.

Yazgulami [269] Tajikistan: Gorno-Badakhshan, along Yazgulyam river. Indo-European, Iranian branch. Possibly up to 4,000 speakers; endangered.

Yidgha [274] Pakistan: Lutkuh valley. Indo-European, Iranian branch. Number of speakers up to 6,000; endangered.

Zaiwa [98] India: Arunachal Pradesh state, near Walong. One of the two languages of the Miduiuish language cluster. Less than 200 speakers; endangered.

Zangs-dkar (Z’angkar) [237c] India: Kashmir, Kargil district. Tibeto-Burman, Central Bodish branch. Number of speakers unknown, possibly up to 8,000; endangered.

Zebākī [271] Afghanistan: Sanglech valley. Indo-European, Iranian branch. May be a dialect of Sanglíč, which has up to 2,000 speakers in total; endangered.

Zeme [140] India: northwestern Manipur and southwestern Nagaland states. Tibeto-Burman; Zeme language cluster. No reliable census information; severely endangered by assimilation with Meithei, official language of Manipur.

Zo [158] India: Manipur state. Tibeto-Burman, Mizo-Kuki-Chin branch. Number of speakers unknown, but may be up to 17,000; severely endangered in India and in Burma, where it is also spoken.
Waigali [279] Afghanistan: southeast Nuristan, Kunar province. Indo-European, Nuristani branch. May be up to 8,000 speakers; endangered.

Wakhji [270] Afghanistan: Pamir mountains. Indo-European, Iranian branch. Spoken in villages along the Panj river; number of speakers may be up to 7,000. Endangered.

Wambule (Ombule) [202] Nepal: confluence of Dūdhkosi and Sunkoši rivers. Tibeto-Burman, Western Kiranti branch, Chaurasiya group. The two Chaurasiya languages have a total of 15,000 speakers; endangered.

Yacham [129] India: Nagaland state. Tibeto-Burman; the closely related Ao subgroup has a total number of about 65,275. Transfer to an Assamese-based creole is general among Ao speakers; severely endangered.

Yakkha [185] Nepal: Tehrathum, Sānkhuva Sābhā, Dhankūṭā districts. Tibeto-Burman, Eastern Kiranti group. Spoken by a few households; on the verge of extinction.

Yazgulami [269] Tajikistan: Gorno-Badakhshan, along Yazgulyam river. Indo-European, Iranian branch. Possibly up to 4,000 speakers; endangered.

Yidgca [74] Pakistan: Lutkuh valley. Indo-European, Iranian branch. Number of speakers up to 6,000; endangered.

Yimchungri [127] India: Nagaland state. Tibeto-Burman. Transfer to an Assamese-based creole is general among Ao speakers; severely endangered.

Zangs-dkar (Z'angkar) [237e] India: Kashmir, Kargil district. Tibeto-Burman, Central Bodish branch. Number of speakers unknown, possibly up to 8,000; endangered.

Zebaki [271] Afghanistan: Sanglech valley. Indo-European, Iranian branch. May be a dialect of Sanglöči, which has up to 2,000 speakers in total; endangered.

Zeme [140] India: northwestern Manipur and southwestern Nagaland states. Tibeto-Burman; Zeme language cluster. No reliable census information; severely endangered by assimilation with Meithei, official language of Manipur.

Zo [158] India: Manipur state. Tibeto-Burman, Mizo-Kuki-Chin branch. Number of speakers unknown, but may be up to 17,000; severely endangered in India and in Burma, where it is also spoken.
